

WS SIGMET

When any of the following phenomena are occurring or expected to occur in your FIR – issue WS SIGMET for each phenomenon **without delay**.

Phenomena: thunderstorms, heavy duststorms, heavy sandstorms, severe turbulence, severe mountain waves, severe icing, radioactive cloud.

STEP 1 Information Received

Source of Information	Phenomena
Special AIREP	Thunderstorms, dust/sandstorms, turbulence/mountain waves, icing
Satellite pictures	
NWP forecasts	
RADAR	Thunderstorms
Lightning information	
WMO RSMCs (Atmospheric transport modelling for environmental emergency)	Radioactive cloud

Key

- WMO abbreviated heading, disseminating centre and transmission day/time
- Name of issuing MWO
- FIR
- Sequence number and validity period day/time
- Description of phenomenon
- Phenomenon observed with time (optional) or forecast to occur, its location, level and movement or expected movement (direction – 8 points of compass)
- Changes in intensity

- For an observed phenomenon, the start of validity should be the same as the issue time. For a forecast phenomenon, the start of validity should be the time the phenomenon is expected to commence in a MWO's FIR.
- The validity of a WS SIGMET shall not be more than 4 hours.

STEP 3 WS SIGMET Transmitted

WS phenomena are hazardous to aircraft operations, so the issue of WS SIGMET must be given high priority and issued without delay.

Renew/Cancel

RENEW

- When the phenomenon has changed and necessitates an update
- When the validity period is due to expire but the phenomenon persists or is expected to persist

CANCEL

- When the phenomenon is no longer occurring or expected to occur
