

太陽周年路徑圖
Paths of the Sun throughout the Year

	日出 Sunrise	上中天 Transit	日落 Sunset	
春分 Vernal Equinox 21/3	90 -1	180 68	271 -1	方位角 Azimuth 仰角 Altitude
夏至 Summer Solstice 22/6	64 -1	360 89	296 -1	方位角 Azimuth 仰角 Altitude
秋分 Autumnal Equinox 23/9	89 -1	180 68	270 -1	方位角 Azimuth 仰角 Altitude
冬至 Winter Solstice 22/12	115 -1	180 44	245 -1	方位角 Azimuth 仰角 Altitude

單位：度 Unit: degrees

上述位置以日面之圓心為準。日出、日落時之仰角約為負一度，實包含了日面視半徑及大氣折射的影響。
The above positions refer to the centre of the Sun's disc. The minus one degree in altitude at sunrise and sunset includes both the apparent radius of the Sun and the effect of atmospheric refraction.

二分點

春分點 — 3月21日 6時45分 | 太陽直射
秋分點 — 9月23日 16時21分 | 赤道

EQUINOXES

Vernal — 0645 March 21 | The Sun is directly
Autumnal — 1621 September 23 | overhead at the Equator.

二至點

夏至點 — 6月22日 00時38分 太陽直射北回歸線
冬至點 — 12月22日 12時48分 太陽直射南回歸線

SOLSTICES

Summer — 0038 June 22 The Sun is directly overhead at
the Tropic of Cancer.
Winter — 1248 December 22 The Sun is directly overhead at
the Tropic of Capricorn.

太陽在6月3日12時21分及7月10日12時29分最接近香港天頂。

The Sun is nearest to being directly overhead at Hong Kong at 1221 on June 3 and again at 1229 on July 10.
