1. 二零二二年二月天氣回顧

由於月內影響華南的冬季季候風較正常強，二零二二年二月香港遠較正常寒冷。本月平均氣溫為 15.2 度，較正常值的 17.1 度低 1.9 度。而二月十九日至二十二日的持續降雨亦令本月遠較正常多雨，全月總雨量為 168.5 毫米，是正常值 38.9 毫米的四倍以上，亦是有記錄以來二月份的第六高。本年首兩個月的累積雨量為 172.6 毫米，是同期正常值 71.9 毫米的兩倍以上。

隨著一道雲帶覆蓋華南及受冬季季候風影響，本月首三日香港多雲及有幾陣雨。由於較乾燥的偏北氣流令雲層轉薄，二月四日下午本港天氣轉為普遍天晴。偏北氣流亦於二月三日至四日為本港帶來寒冷的早上。隨著漸轉吹東風，二月五日本港大致多雲及短暫時間有陽光。受一股清勁至強風程度的偏東氣流影響，翌日部分時間有陽光。隨著一道廣闊雲帶覆蓋華南，二月七日本港轉為多雲，有幾陣雨及薄霧。二月八日至十日持續大致多雲。二月八日早上亦有幾陣雨。

隨著雲層轉薄，二月十一日本港天氣轉為普遍天晴。受偏東氣流影響，二月十二日早上有薄霧，日間部分時間有陽光。一道冷鋒於二月十三日日間橫過廣東沿岸地區。當日本港天氣轉為多雲及較涼，有幾陣雨及薄霧。在乾燥大陸氣流影響下，二月十四日稍後本港天氣轉為普遍天晴及乾燥。隨著東風增強，二月十五日至十六日本港雲量增多及日間部分時間有陽光。隨著一道雲帶覆蓋廣東沿岸及受一股強風程度的偏東氣流影響，其後兩日本港天氣清涼，多雲及有幾陣雨和薄霧。

一道冷鋒於二月十九日凌晨時分橫過廣東沿岸地區。在與其相關的強烈冬季季候風及高空擾動影響下，二月十九日至二十二日本港天氣轉為天陰、寒冷及頻密有雨。在這四日本港普遍錄得超過 150 毫米雨量。長時間寒冷及有雨的天氣亦令天文台氣溫於二月二十一日早上下降至全月最低的 7.5 度。隨著高空擾動遠離，二月二十三日至二十五日本港天氣轉為普遍天晴，早上寒冷。隨著冬季季候風緩和，本月餘下時間本港持續普遍天晴，氣溫逐步回升。而天文台氣溫於二月二十八日下午上升至全月最高的 22.5 度。

本月沒有熱帶氣旋在南海及北太平洋西部出現。

本月沒有航機因惡劣天氣須轉飛其他地方。表 1.1 載列本月份發出及取消各種警告／信號的詳情。

1. The Weather of February 2022

With stronger than normal winter monsoon affecting southern China in the month, the weather of Hong Kong was much colder than usual in February 2022. The monthly mean temperature was 15.2 degrees, 1.9 degrees below the normal figure of 17.1 degrees. Mainly attributing to the continuous rain episode on 19 – 22 February, the month was also much wetter than usual with a total rainfall of 168.5 millimetres, more than four times of the normal of 38.9 millimetres and the sixth highest on record for February. The accumulated rainfall recorded in the first two months of the year was 172.6 millimetres, more than two times of the normal figure of 71.9 millimetres for the same period.

Under the influence of the winter monsoon and a broad cloud band over southern China, the weather of Hong Kong was cloudy with a few rain patches on the first three days of the month. With the cloud band thinning out by the drier northerly airstream, local weather turned generally fine on the afternoon of 4 February. The northerly airstream also brought cold mornings to the territory on 3 – 4 February. With winds turning gradually to the east, it was mainly cloudy with sunny intervals on 5 February. Affected by a fresh to strong easterly airstream, there were sunny periods on the next day. With a broad band of clouds covering southern China, the weather of Hong Kong turned cloudy with a few rain and mist patches on 7 February. Local weather remained mainly cloudy on 8 – 10 February. There were also a few rain patches on the morning of 8 February.

With the cloud band thinning out, the weather of Hong Kong became generally fine on 11 February. Under the influence of an easterly airstream, there were morning mist and sunny periods during the day on 12 February. A cold front moved across the coastal areas of Guangdong during the day on 13 February. The weather of Hong Kong turned cloudy and cooler with a few rain and mist patches on that day. Under the influence of the dry continental airstream, local weather became generally fine and dry later on 14 February. With winds freshening from the east, local weather turned cloudier with sunny periods during the day on 15 – 16 February. Affected by a strong easterly airstream and a cloud band covering the coast of Guangdong, it was cloudy and cool with a few rain and mist patches on the next two days.

A cold front moved across the coastal areas of Guangdong in the small hours of 19 February. Under the influence of the associated intense winter monsoon and the upper-air disturbances, the weather of Hong Kong became overcast and cold with frequent rain on 19 – 22 February. More than 150 millimetres of rainfall were generally recorded over the territory on these four days. The prolonged cold and rainy weather also brought the temperature at the Observatory down to 7.5 degrees on the morning of 21 February, the lowest of the month. With the departure of the upper-air disturbances, the weather turned generally fine with cold mornings on 23 – 25 February. With the moderation of the winter monsoon, local weather remained generally fine with temperatures rising progressively towards the end of the month. On the afternoon of 28 February, the

temperature at the Observatory rose to a maximum of 22.5 degrees, the highest of the month.

There was no tropical cyclone over the South China Sea and the western North Pacific in February 2022.

During the month, no aircraft was diverted due to adverse weather. Details of the issuance and cancellation of various warnings/signals in the month are summarized in Table 1.1.

觀測站 Station	香港國際機場 Hong Kong International Airport		京士柏 King's Park		橫瀾島^ Waglan Island^	

橫瀾島於二月二十日 5 時 40 分錄得本月最高陣風 67 公里/小時，風向 010 度。

The maximum gust peak speed recorded at Waglan Island was 67 kilometres per hour from 010 degrees at 0540 HKT on 20 February.

低能見度是指能見度低於 8 公里，不包括出現霧、薄霧或降水。

- 在2004年及以前，香港國際機場的能見度讀數是基於專業氣象觀測員每小時的觀測數據。在2005年及以後，讀數是採用位於機場南跑道中間的能見度儀表在每小時前10分鐘的平均數據。這與使用儀器觀測來改進能見度評估的國際趨勢是一致的。

- 在2007年10月10日前曾出現於此摘錄內香港國際機場2005年及以後的低能見度時數資料乃基於專業氣象觀測員每小時的觀測數據。有關資料已於2007年10月10日起改為以機場南跑道中間之能見度儀表在每小時前10分鐘的平均數據計算。

Reduced visibility refers to visibility below 8 kilometres when there is no fog, mist, or precipitation.

- The visibility readings at the Hong Kong International Airport are based on hourly observations by professional meteorological observers in 2004 and before, and average readings over the 10-minute period before the clock hour of the visibility meter near the middle of the south runway from 2005 onwards. The change of the data source in 2005 is an improvement of the visibility assessment using instrumented observations following the international trend.

- Before 10 October 2007, the number of hours of reduced visibility at the Hong Kong International Airport in 2005 and thereafter displayed in this summary was based on hourly visibility observations by professional meteorological observers. Since 10 October 2007, the data have been revised using the average visibility readings over the 10-minute period before the clock hour, as recorded by the visibility meter near the middle of the south runway.

^ 如橫瀾島未能提供數據，則以長洲或其他鄰近氣象站的數據作補充，以計算盛行風向和平均風速。

^ In case the data are not available from Waglan Island, observations of Cheung Chau or other nearby weather stations will be incorporated in computing the Prevailing Wind Direction and Mean Wind Speed.

3.3 2022年2月香港天文台錄得的日平均氣溫

3.3 Daily Mean Temperature recorded at the Hong Kong Observatory for February 2022

— 第95百分位數 95th percentile	— 第75百分位數 75th percentile	— 5天移動平均 Running 5-day average	— 第25百分位數 25th percentile	— 第5百分位數 5th percentile	● 日平均氣溫 Daily mean temperature
------------------------------	------------------------------	-----------------------------------	------------------------------	----------------------------	-----------------------------------

備註:

極高: 高於第 95 百分位數
 高於正常: 介乎第 75 和第 95 百分位數之間
 正常: 介乎第 25 和第 75 百分位數之間
 低於正常: 介乎第 5 和第 25 百分位數之間
 極低: 低於第 5 百分位數
 百分位數值及 5 天移動平均值是基於 1981 至 2010 年的數據計算所得

Remarks:

Extremely high: above 95th percentile
 Above normal: between 75th and 95th percentile
 Normal: between 25th and 75th percentile
 Below normal: between 5th and 25th percentile
 Extremely low: below 5th percentile
 Percentile and 5-day running average values are computed based on the data from 1981 to 2010
