

# 冬季服務高峰期

WINTER SURGE

## Winter Surge Prediction Model on Emergency Admission to Medicine Specialty

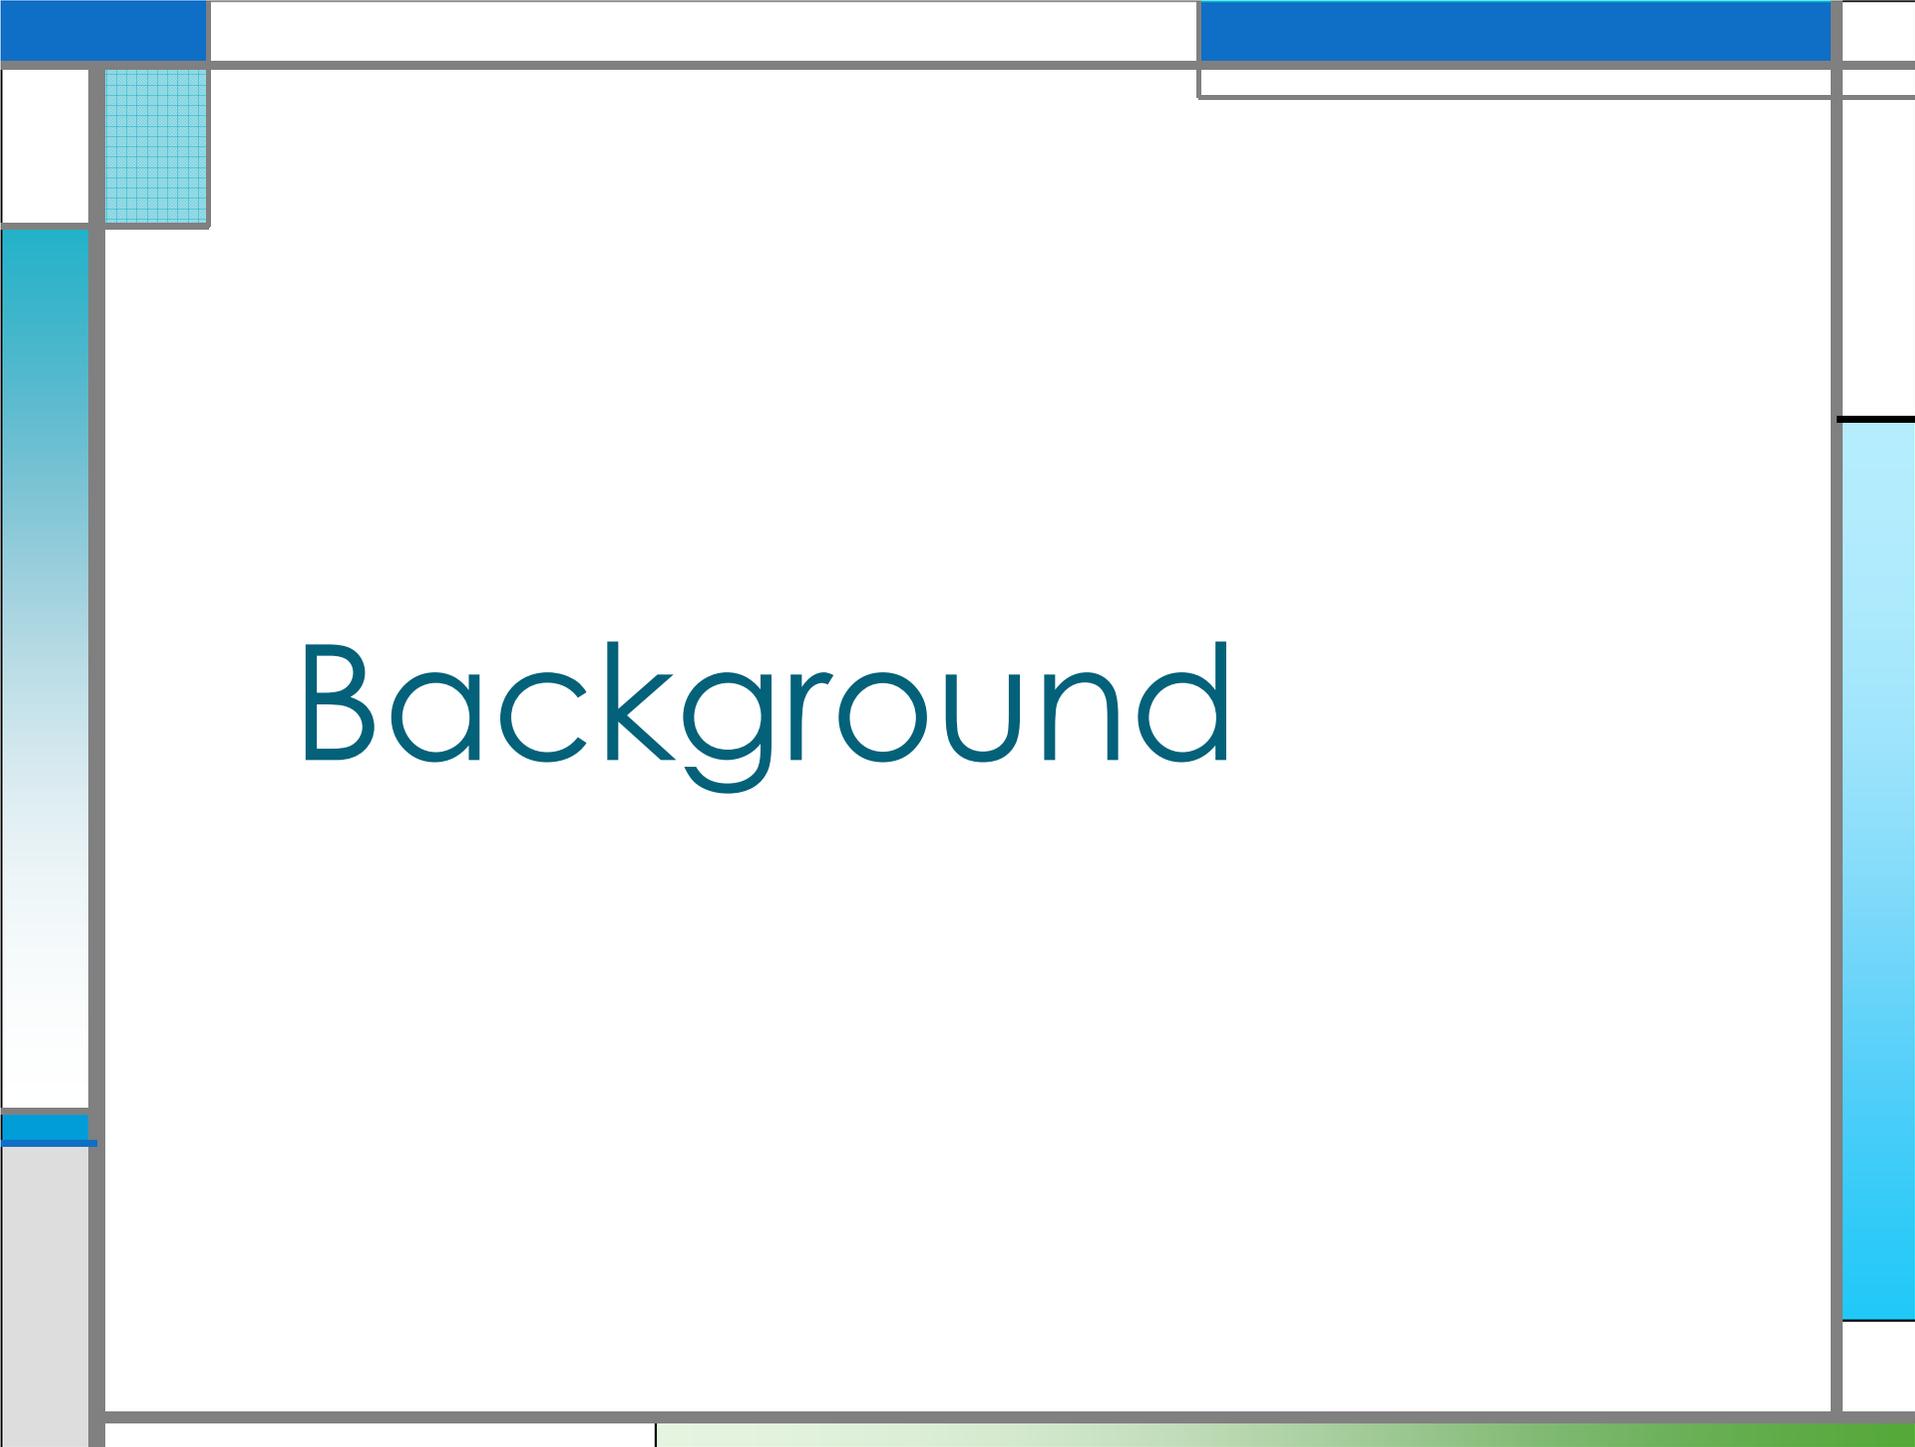

Alan CHEUNG  
Statistics and Workforce Planning Department  
Hospital Authority Head Office

22 Jan 2018

# Outline of Presentation

- Background
- Model Methodology
- Model Results
- Model Validation
- Model Predictive Performance
- Applications
- Further Enhancement of the Model

Background

# Hospital Authority, Hong Kong

## Facility [as at 31 Mar 2017]

## Service Throughputs in 2016/17

42 Hospitals / Institutions

28 126 hospital beds

1.1M Inpatient discharges and deaths

8.6M Inpatient & day inpatient patient days

18 Accident & Emergency (A&E) Departments

2.2M A&E attendances

*No. of attendances*

48 Specialist Outpatient Clinics

Specialist outpatient (clinical):

7.6M

Allied health (outpatient):

2.7M

73 General Outpatient Clinics

Primary Care:

6.4M

## Manpower Total: 74 874 [as at 31 Mar 2017]

Medical 6 164 (8.2%)

Nursing 24 980 (33.4%)

Allied Health 7 572 (10.1%)

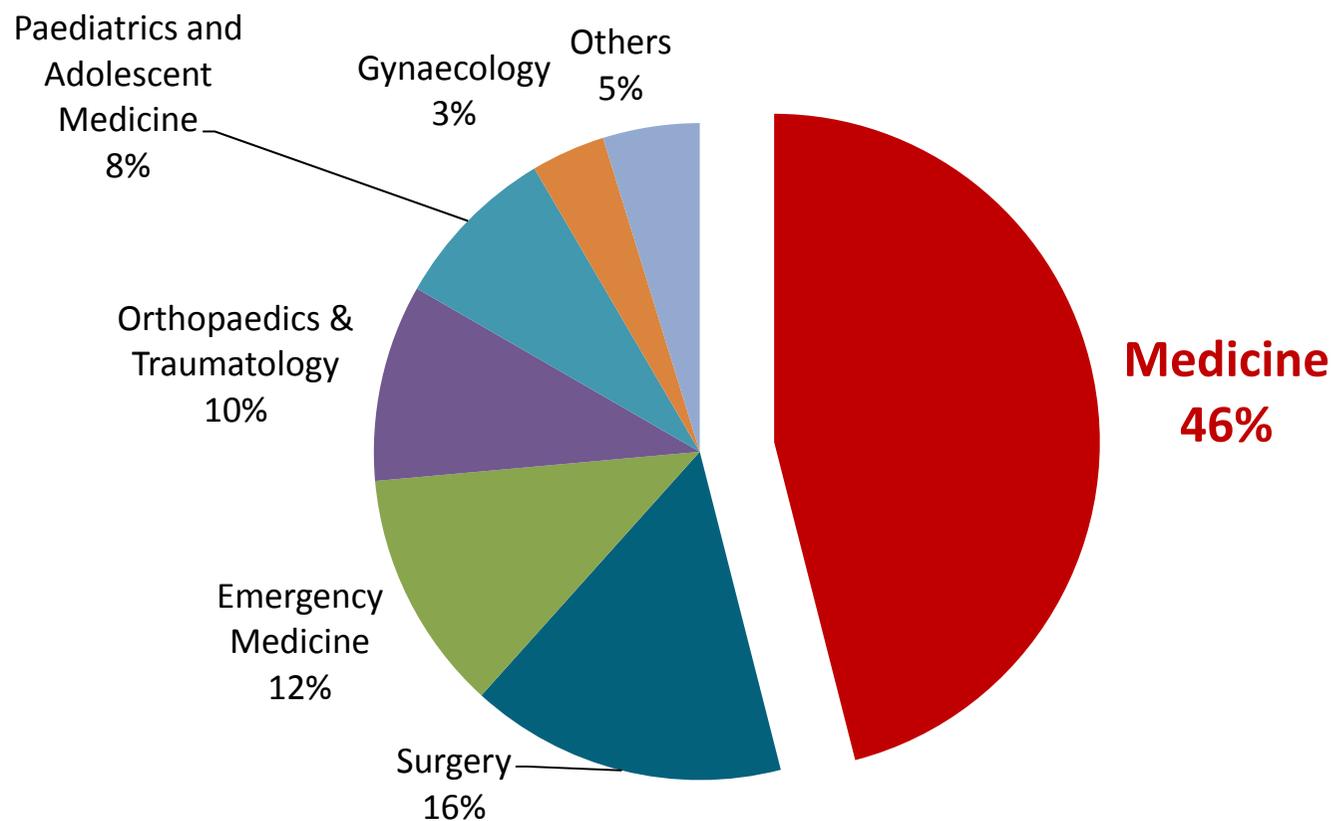

Supporting (care-related) 14 698 (19.6%)

Others 21 459 (28.7%)

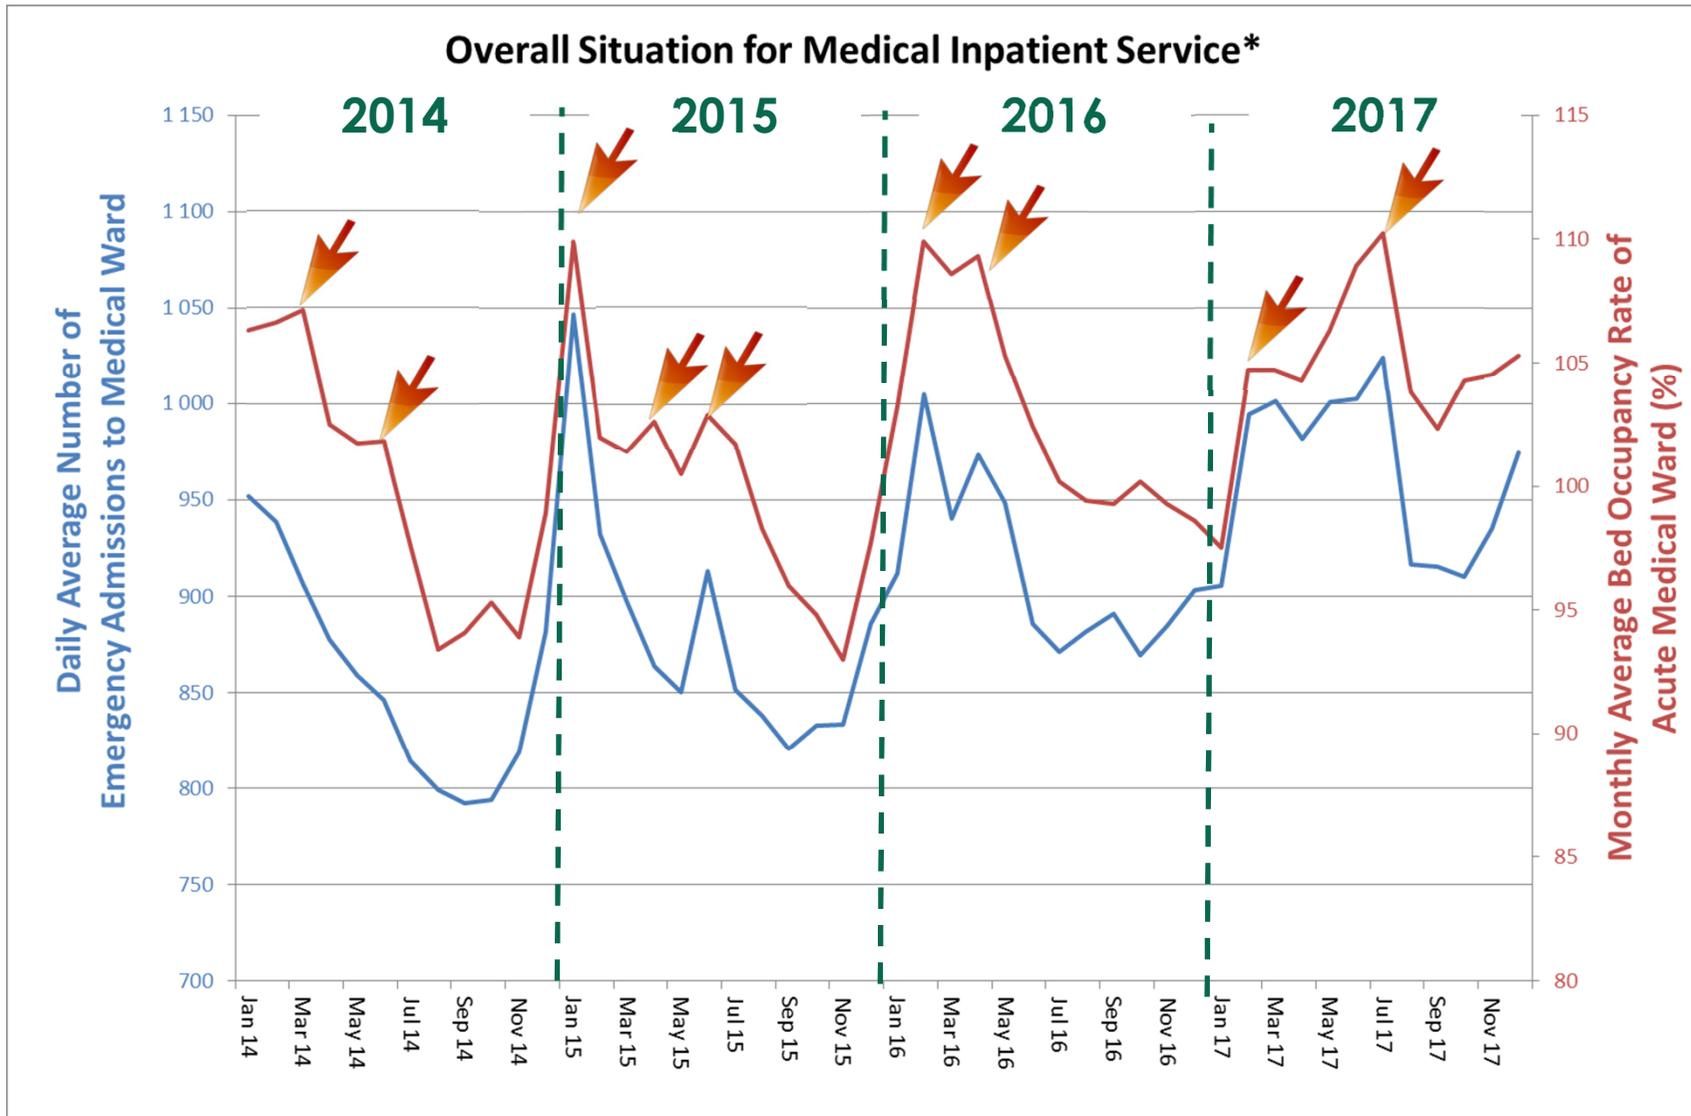

# Medical admissions account for almost half of total emergency admissions

## No. of Emergency Admissions by Speciality in 16/17

# Usually 2-3 surges in emergency medical admission every year

\* The above chart only cover general acute hospitals with 24 hour A&E services.

# How Analytics can contribute ?

## Predict

To predict the surge in admission before it happens

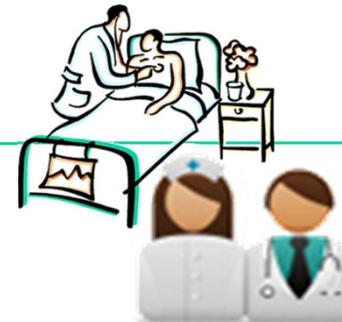

## Alert

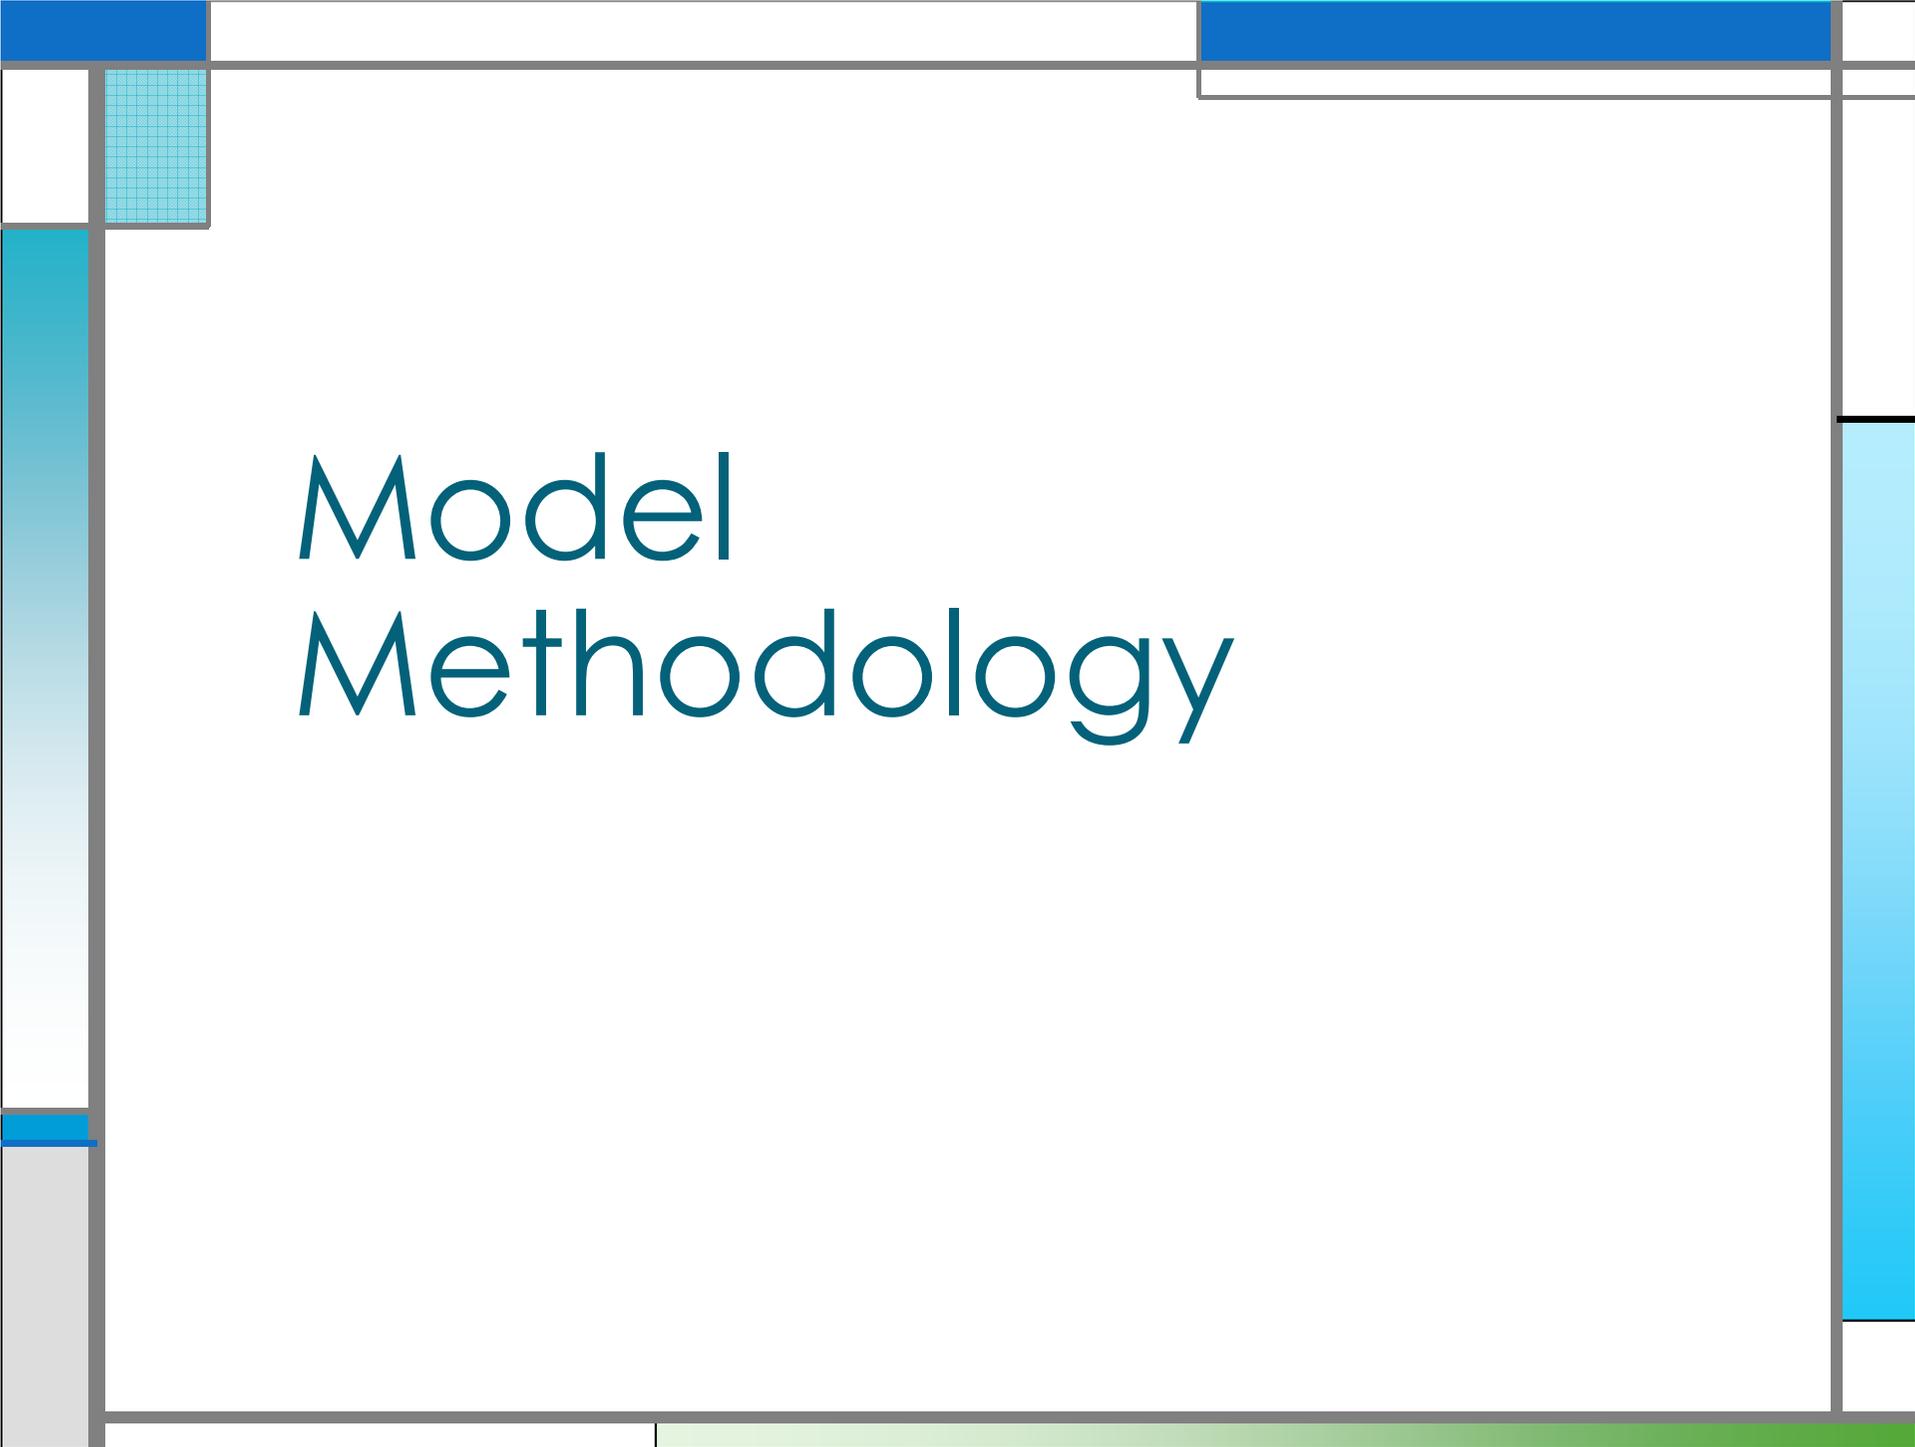

To alert frontline / management

## Proactive Measures

e.g. scale down non-urgent services; add temporary beds; deploy staff

Model  
Methodology

# Data Sources & Modelling Methodology

Hospital Authority

Records in Clinical Management System (CMS)

Hong Kong Observatory

Temperature, relative humidity, air pressure, cold/hot weather warning, etc.

Environmental Protection Department

Air pollution index

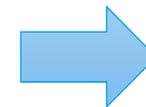

...etc

## Statistical model

(Co-integrated time-series regression model)

Comparing different models by Akaike information criterion (AIC) and Bayesian Information Criterion (BIC)

To establish an alert signal through empirical data analysis

# Model Building & Validation

**Training dataset**

207 weeks' data in  
2008 to 2011

**Validation dataset**

104 weeks' data in  
2012 & 2013

**Model  
building**

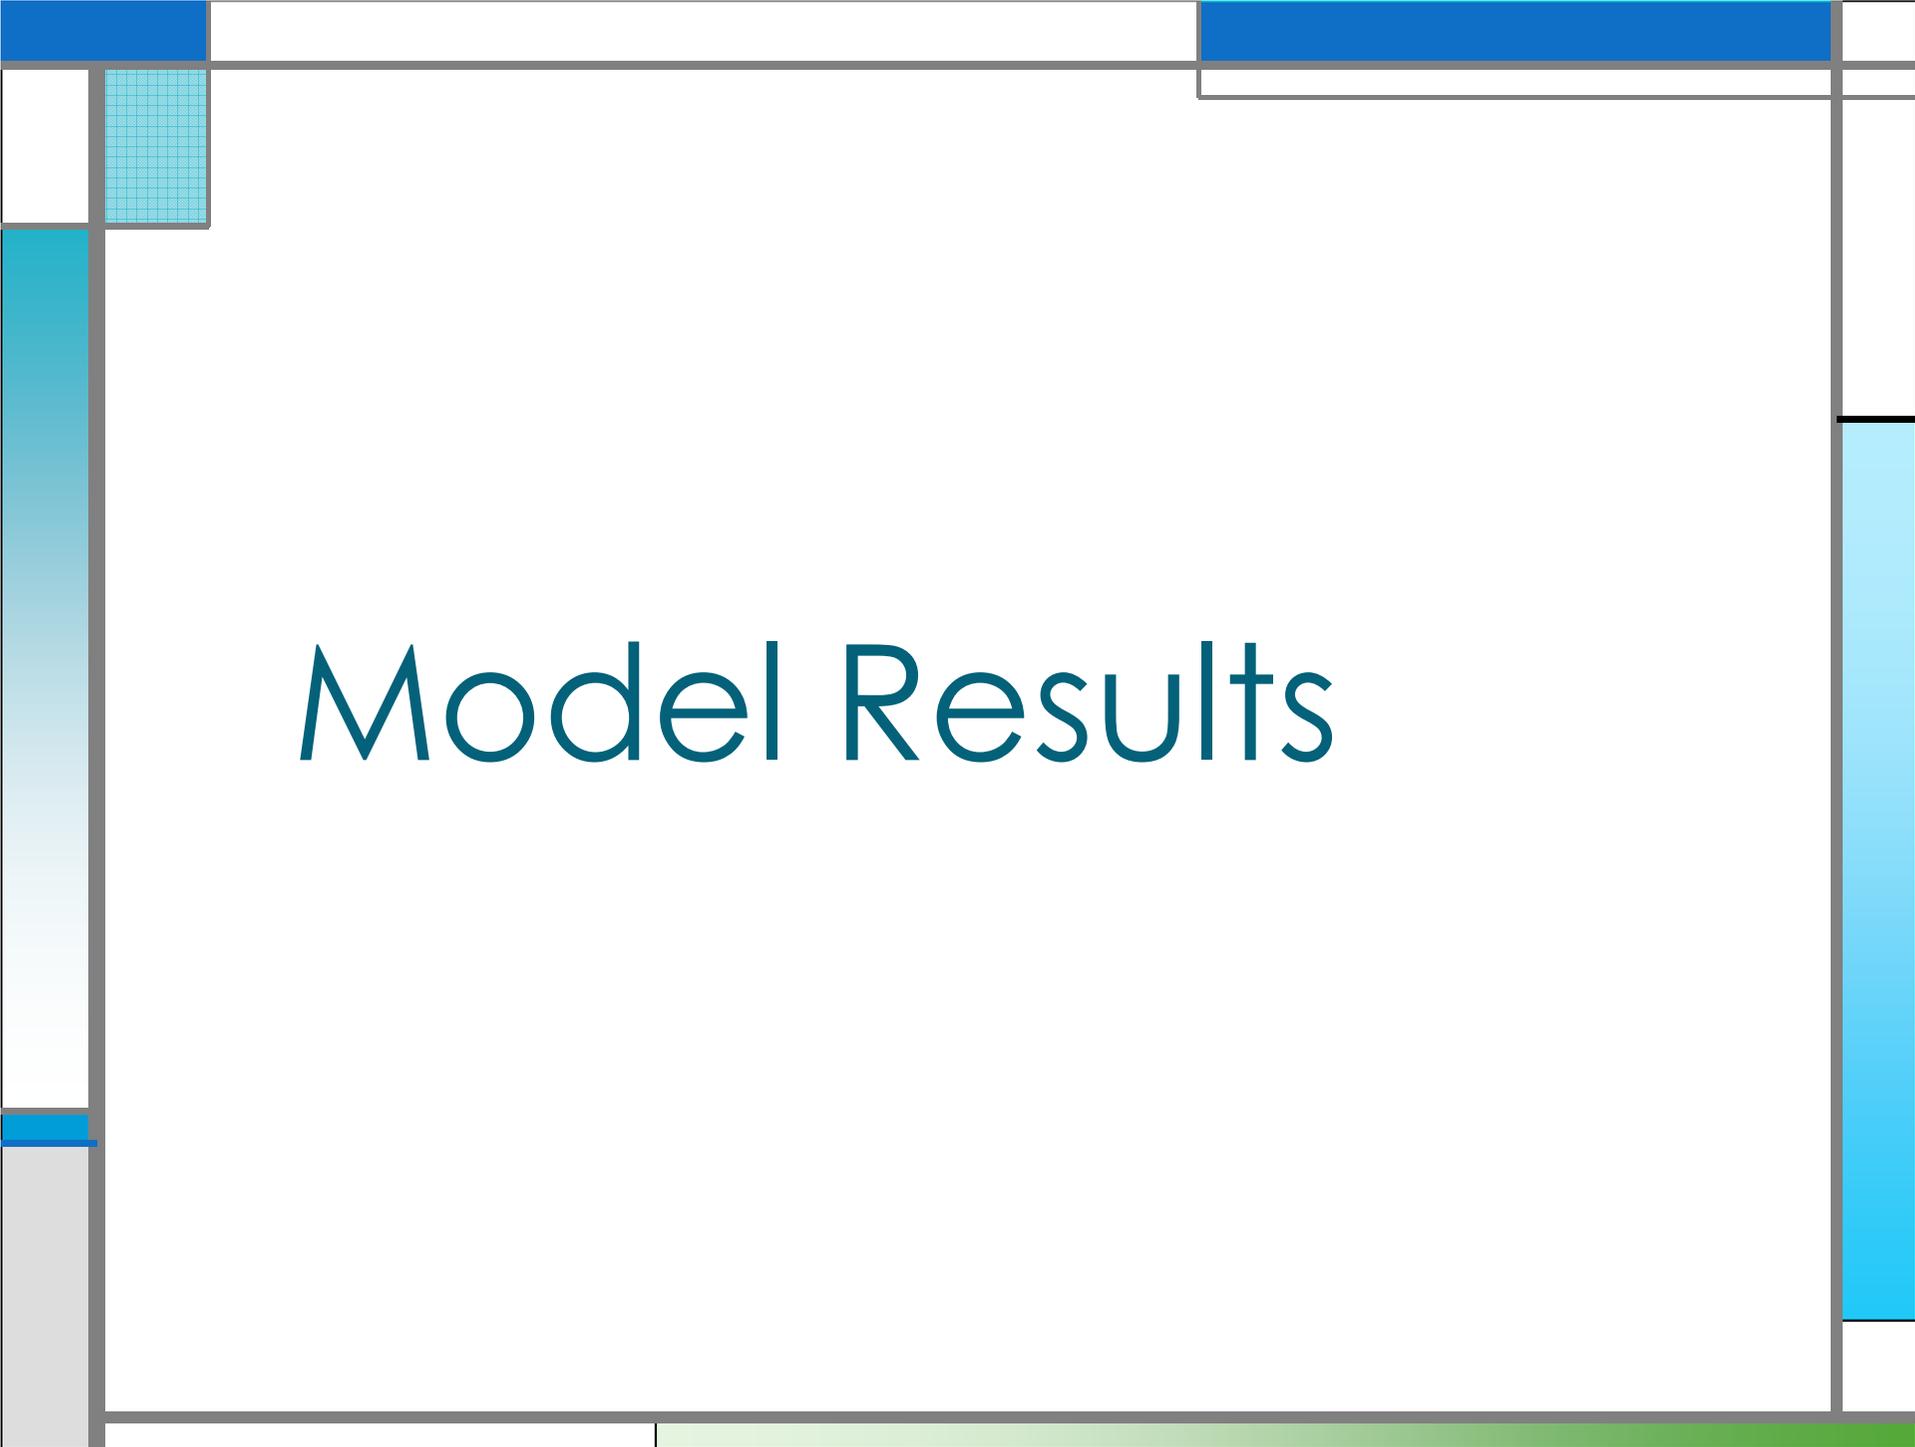

**Model  
validation**

**Statistical model**  
(Co-integrated  
time-series  
regression model)

**Model  
predictive  
performance  
monitoring**

2014  
onwards

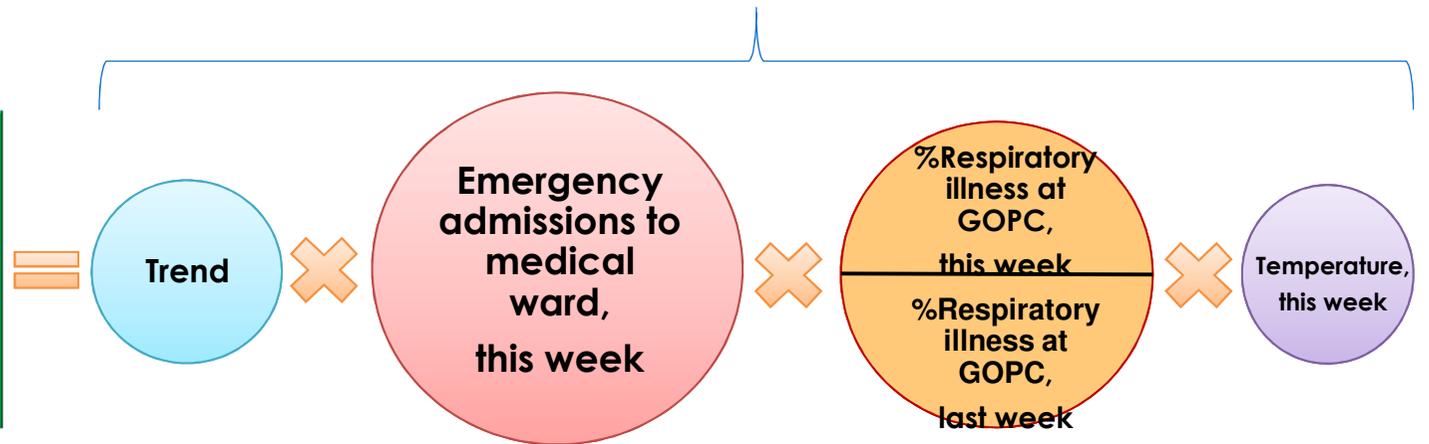

# Model Results

# The Co-integrated Time-series Regression Model

Every week predicts

Emergency admissions to medical ward, next week

Predictors

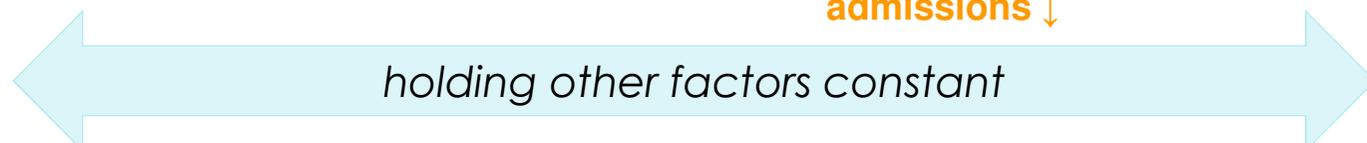

increasing trend

positively associated

When  $\text{relativity} > 1$ , admissions  $\uparrow$

When  $\text{relativity} < 1$ , admissions  $\downarrow$

in quadratic relationship

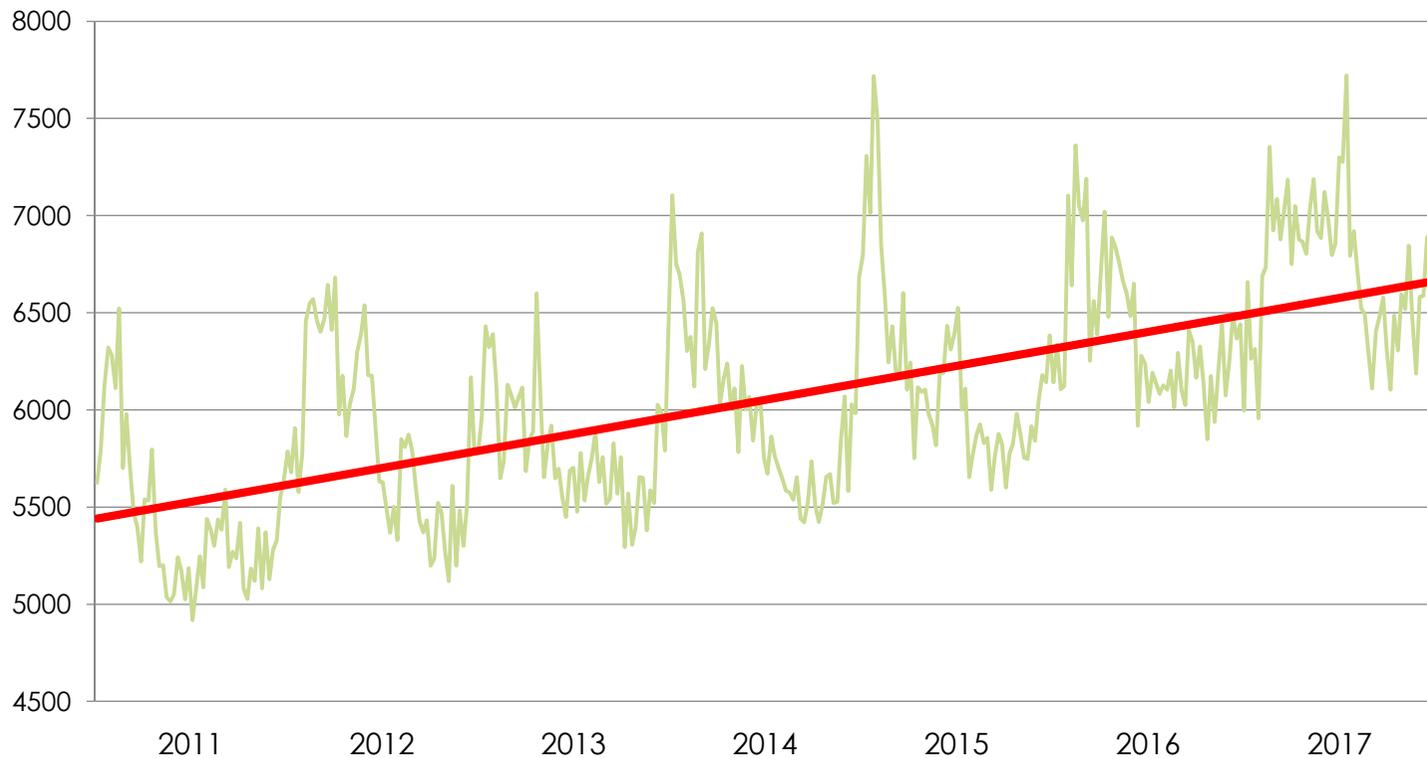

$$Y_t = C_1 \times e^{\alpha t} \times (Y_{t-1})^\beta \times \left\{ \frac{(X_{t-1})^{\lambda_1}}{(X_{t-2})^{\lambda_2}} \right\} \times \exp \left\{ \frac{(W_{t-1} - \phi)^2}{C_2} \right\}$$

## 4 Predictors in the Model: (1) Trend

On average, the admission number  
has increased by **3.7%** per annum  
over the past 6 years

Weekly no. of Emergency Admissions to Medical Ward

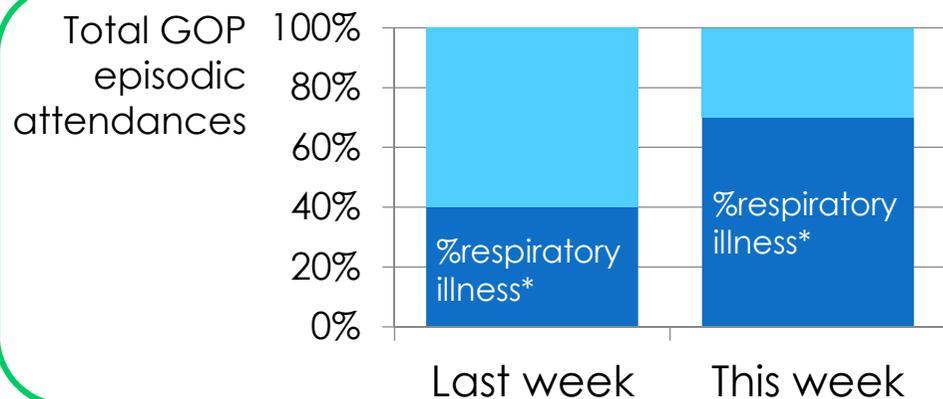

## 4 Predictors in the Model: (2) Preceding Week's Figure

The weekly emergency medical admissions depends on its preceding week's value

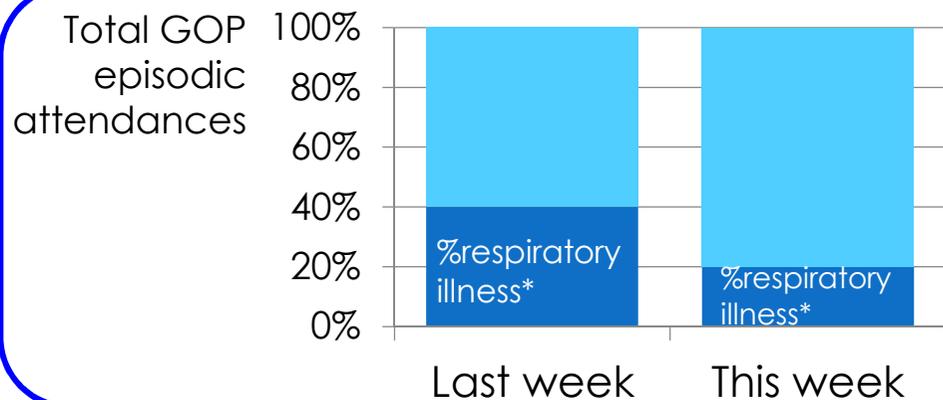

*i.e. a strong autocorrelation **0.87**  
between week<sub>T-1</sub> and week<sub>T</sub> data*

## 4 Predictors in the Model: (3) Respiratory Illness at General Outpatient Clinic

↑ emergency medical admissions next week

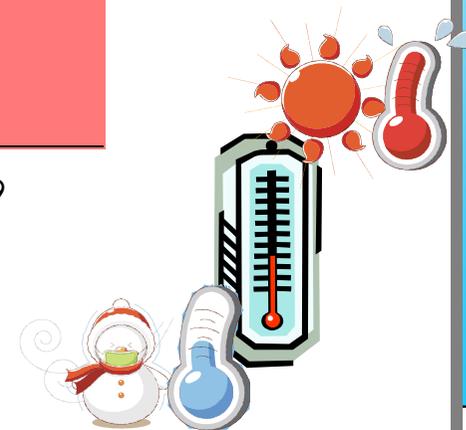

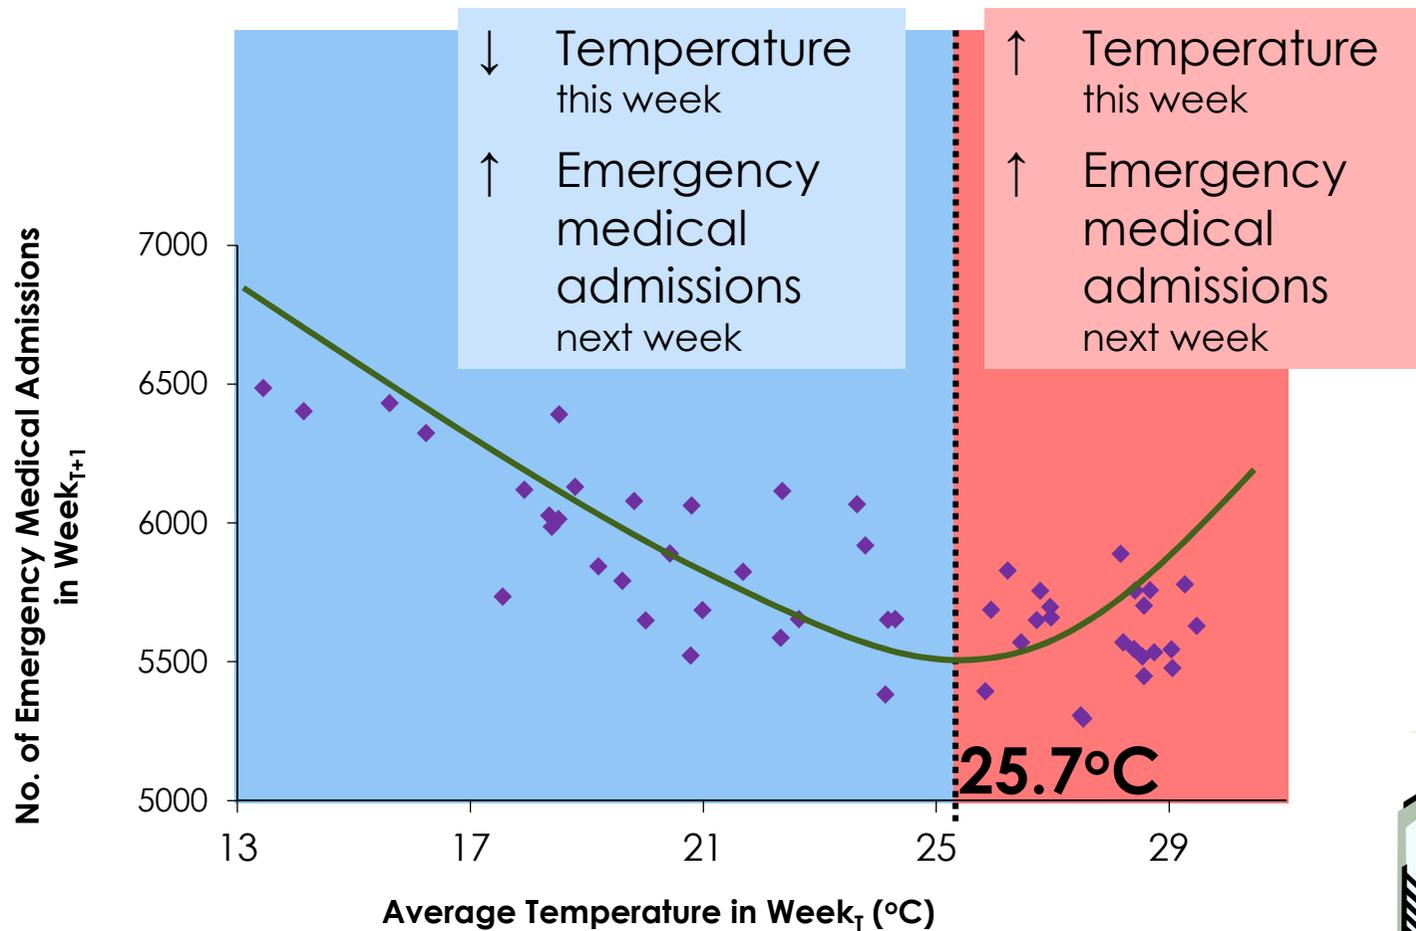

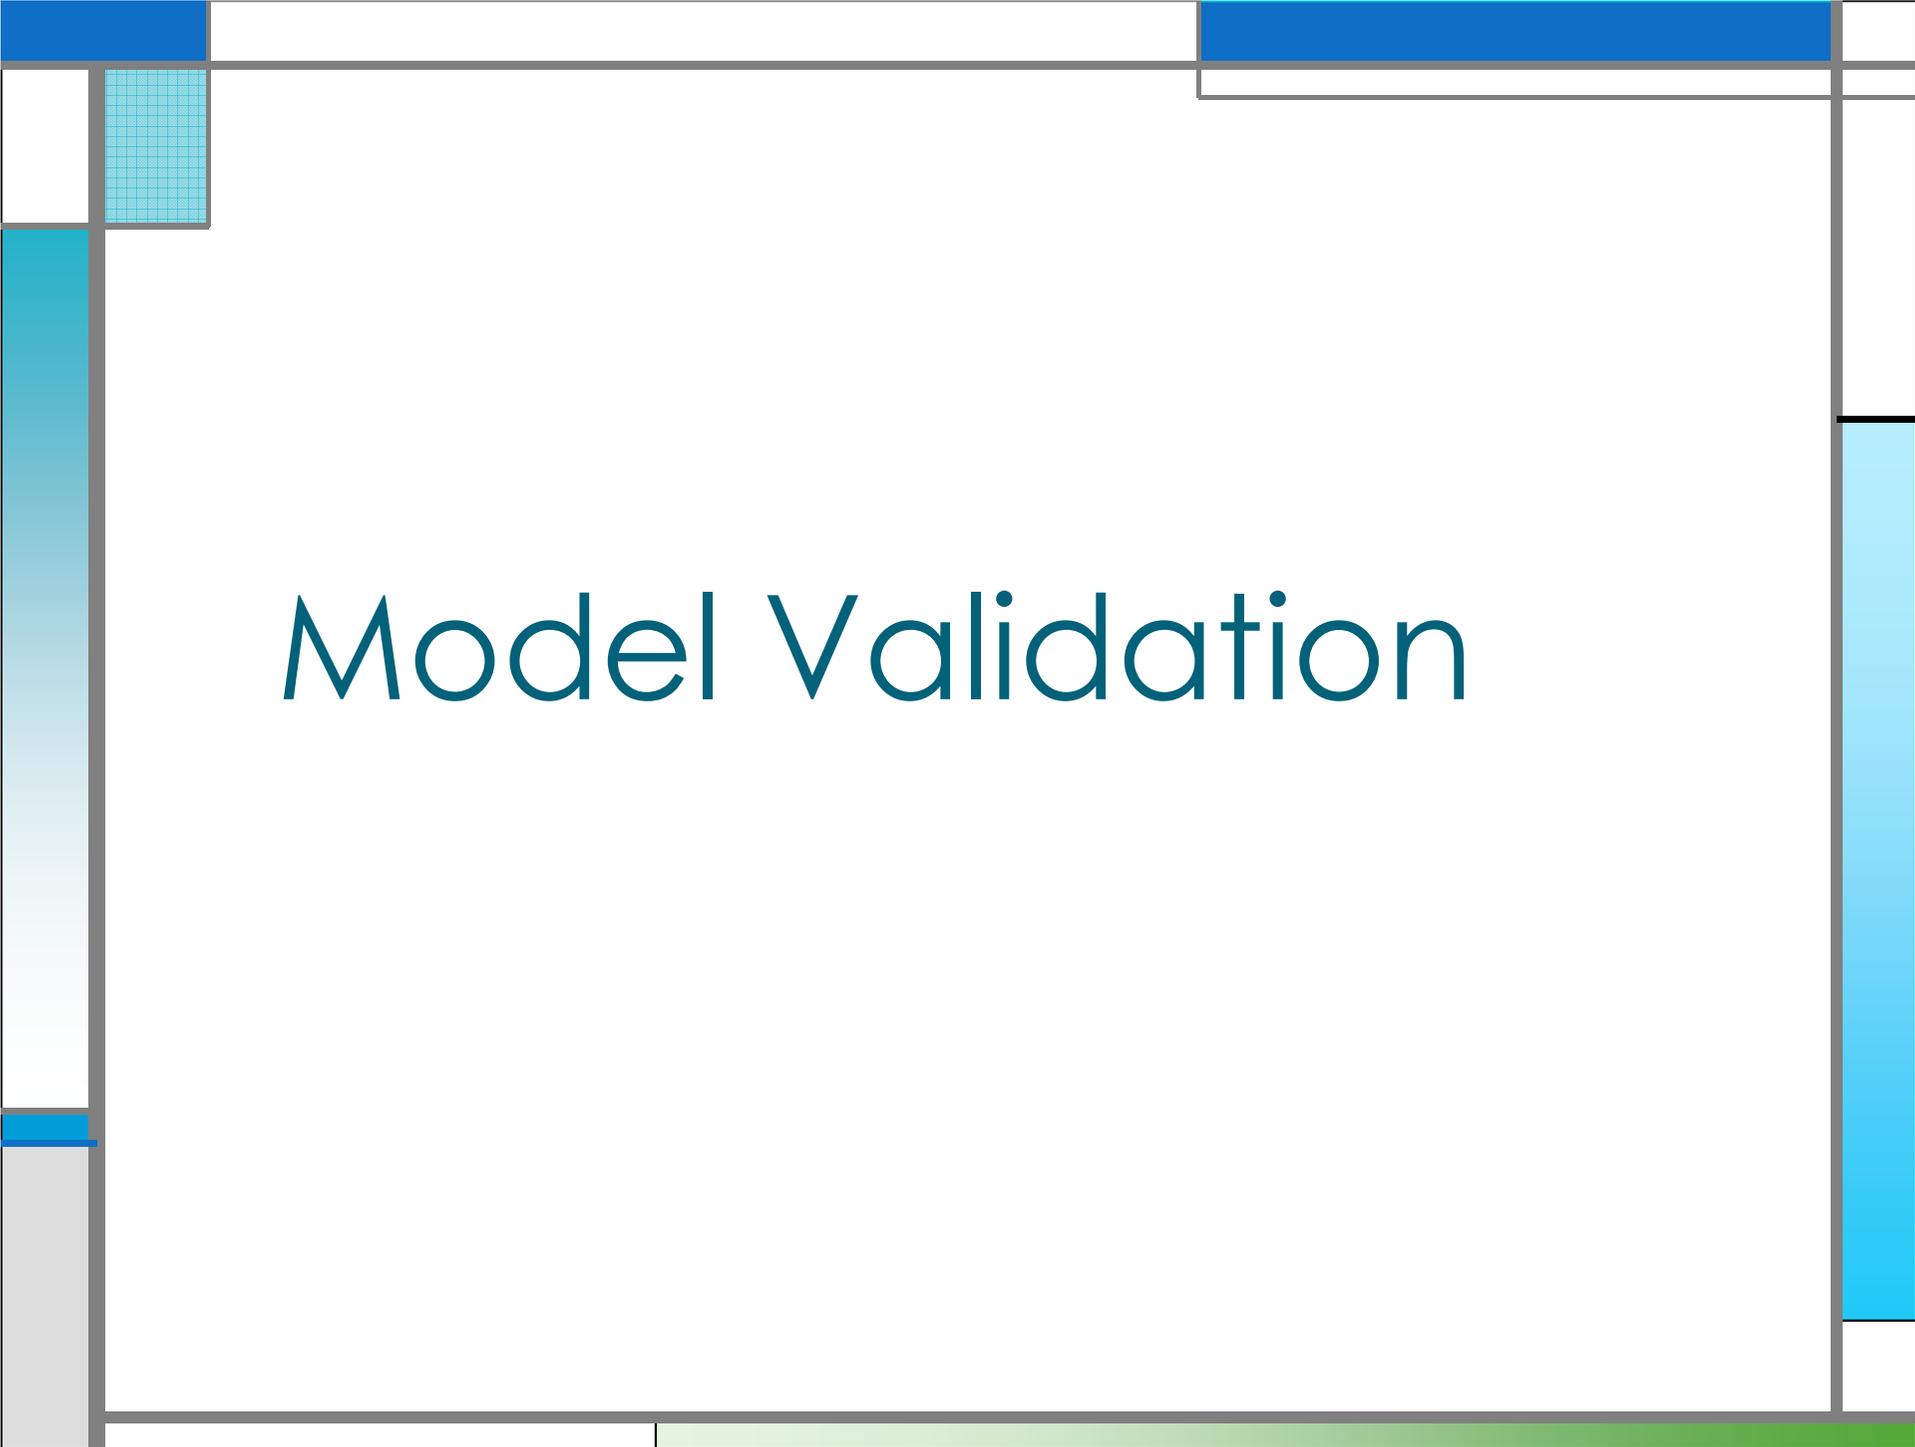

↓ emergency medical admissions next week

\* Based on International Classification of Primary Care-2 (ICPC) codes: R72, R74-R78, R80, R81 and R83

# 4 Predictors in the Model: (4) Temperature

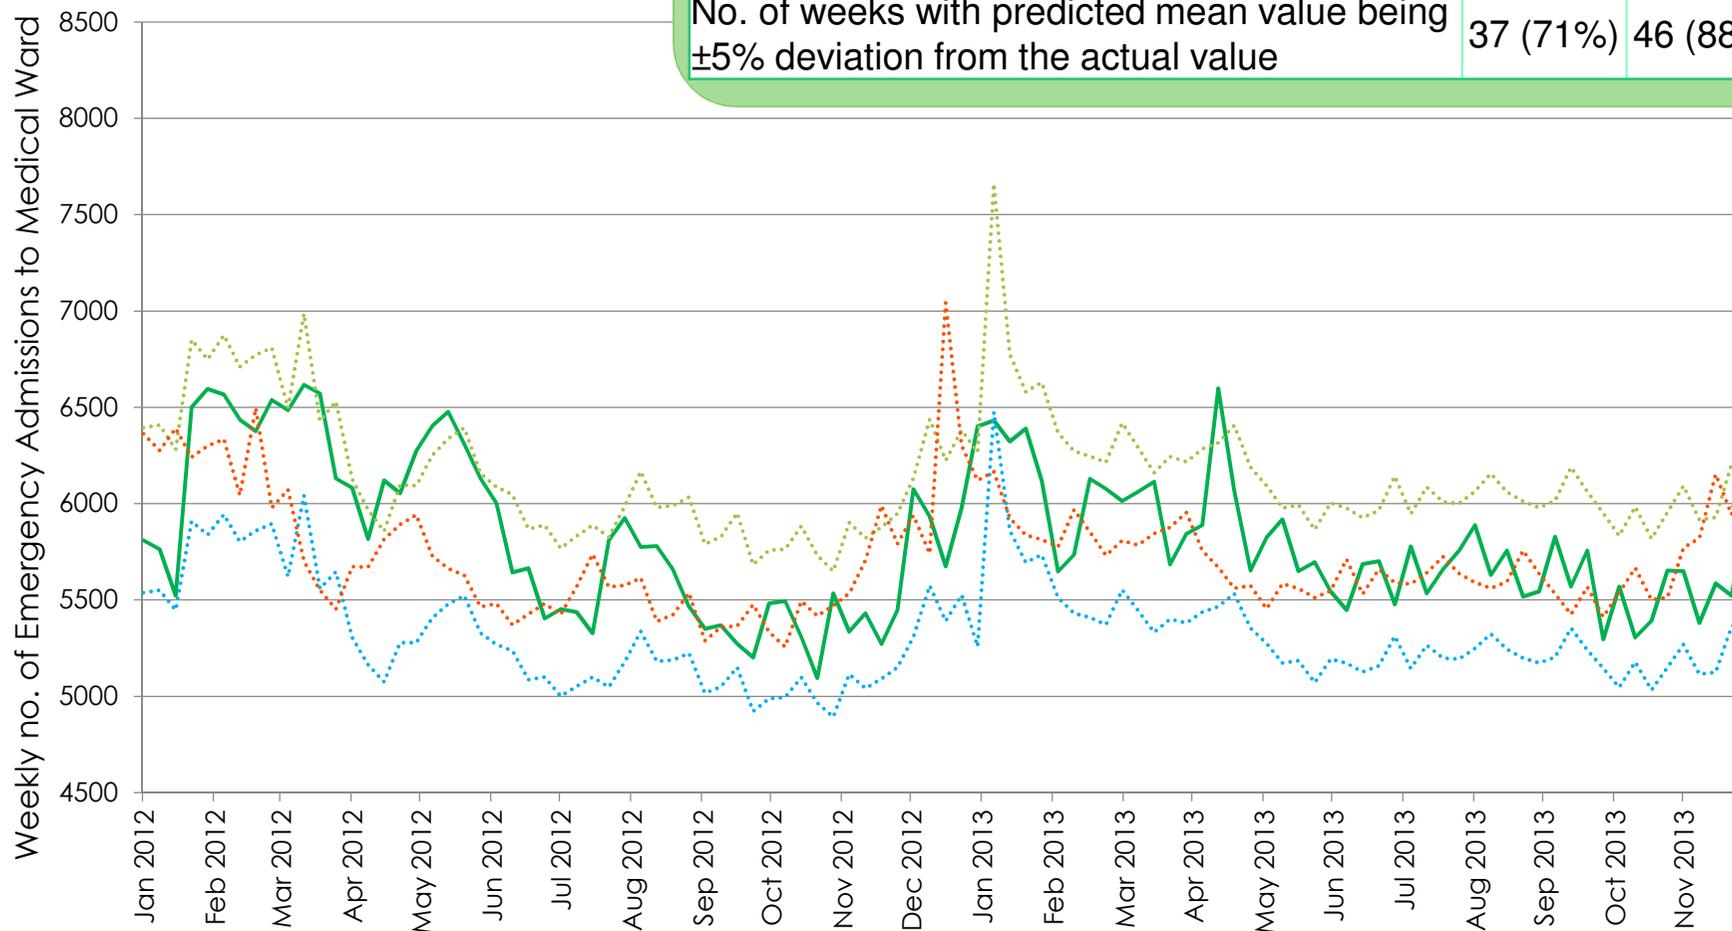

# Model Validation

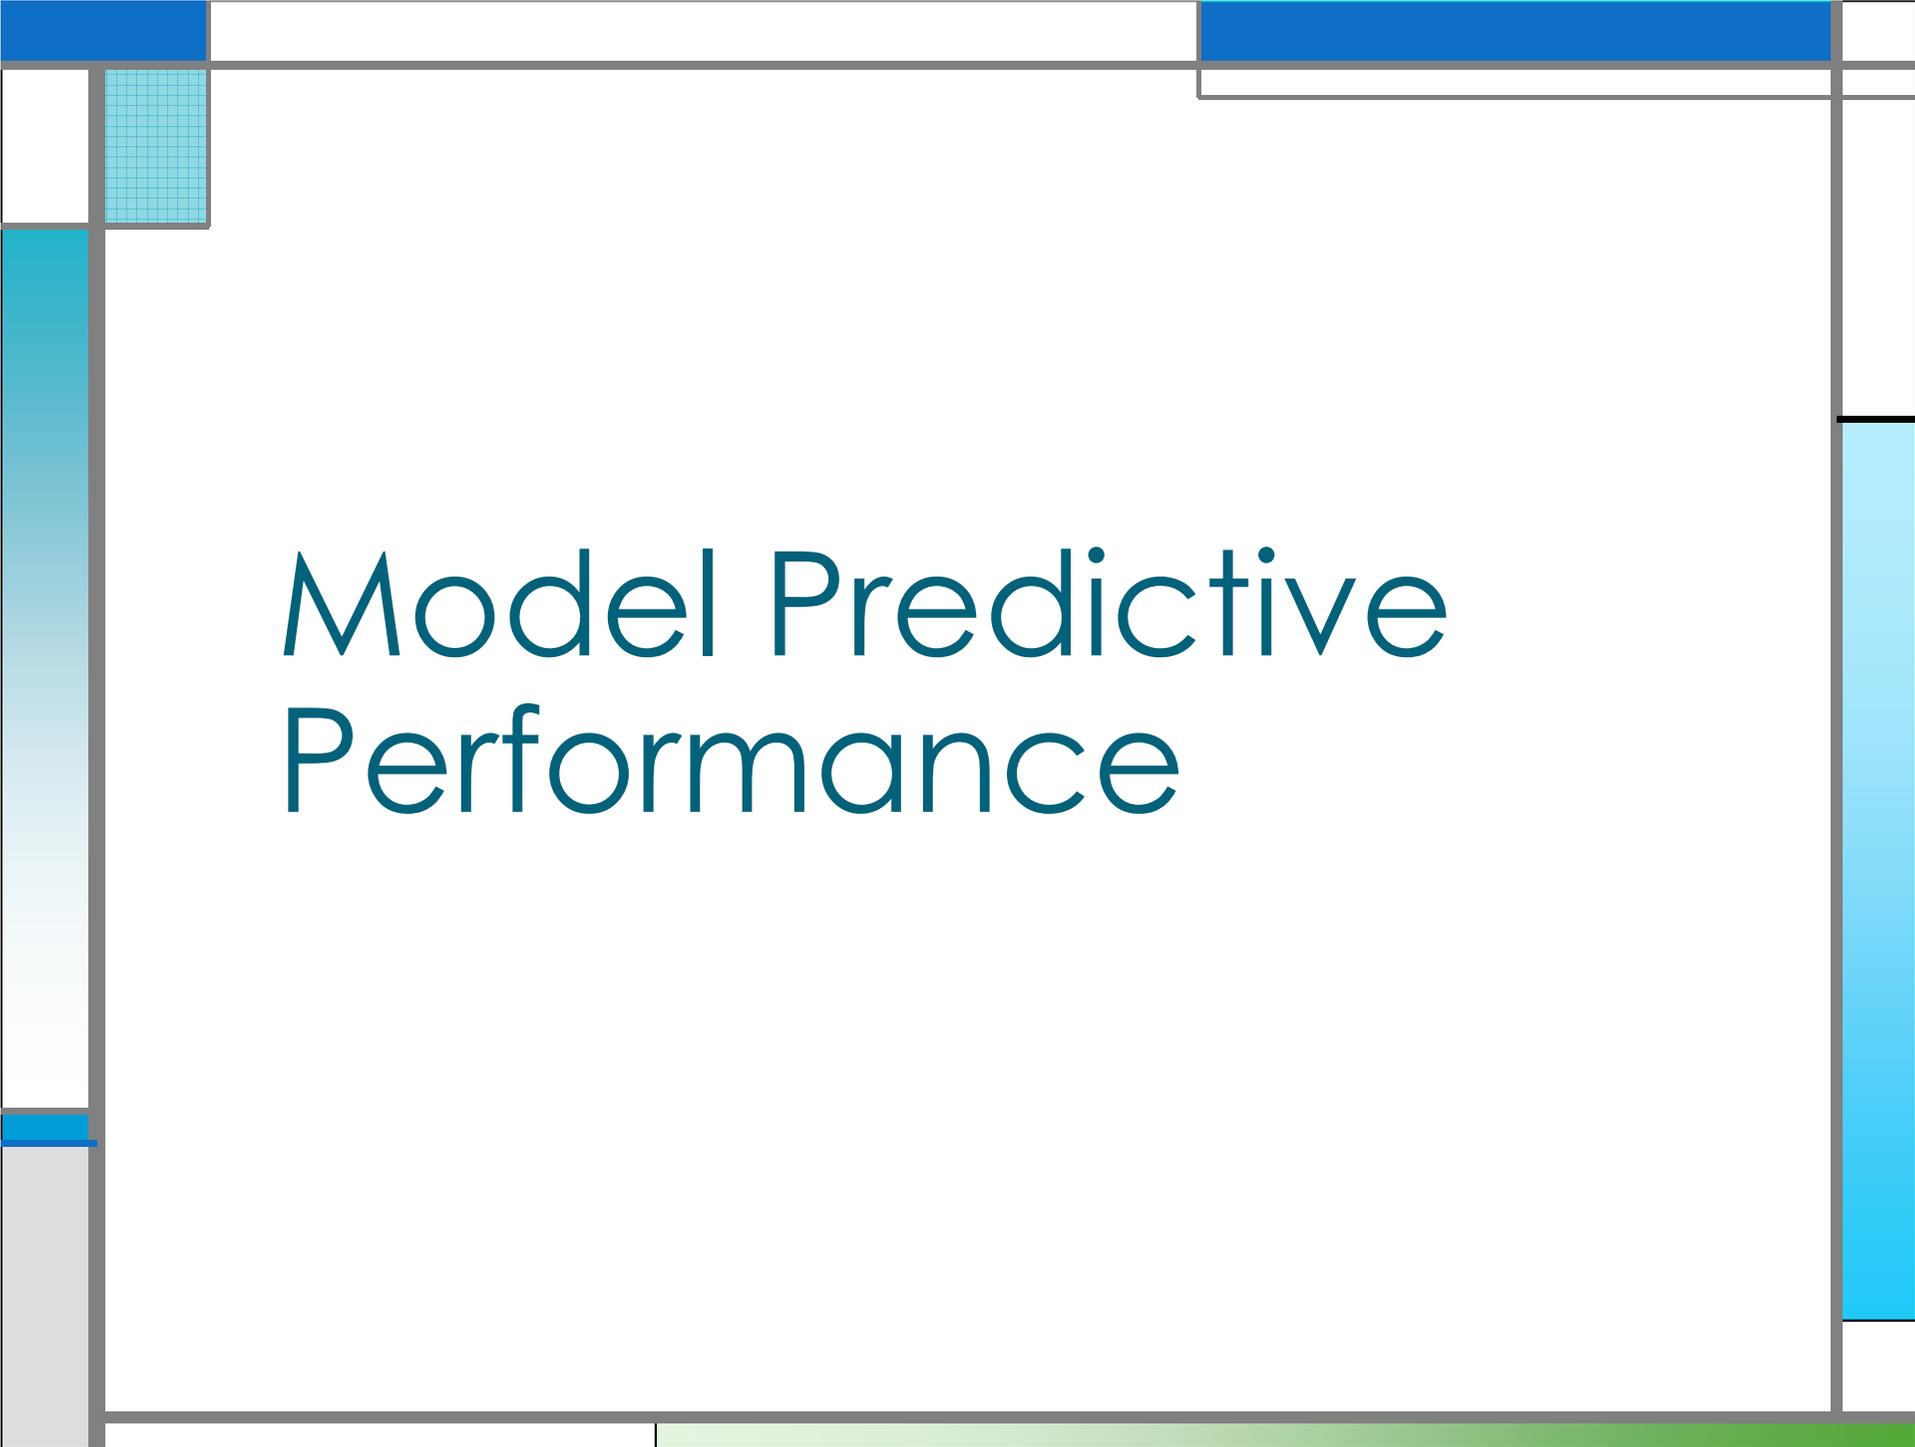

# Model Validation in 2012 and 2013

## Predictive Performance

| Year   | 2012     | 2013     |
|--|----------|----------|
| Total no. of weeks   | 52       | 52       |
| No. of weeks with the actual value falling within 95% prediction interval              | 47 (90%) | 49 (94%) |
| No. of weeks with predicted mean value being $\pm 5\%$ deviation from the actual value | 37 (71%) | 46 (88%) |

# Model Predictive Performance

# Set-up of Alert Signals

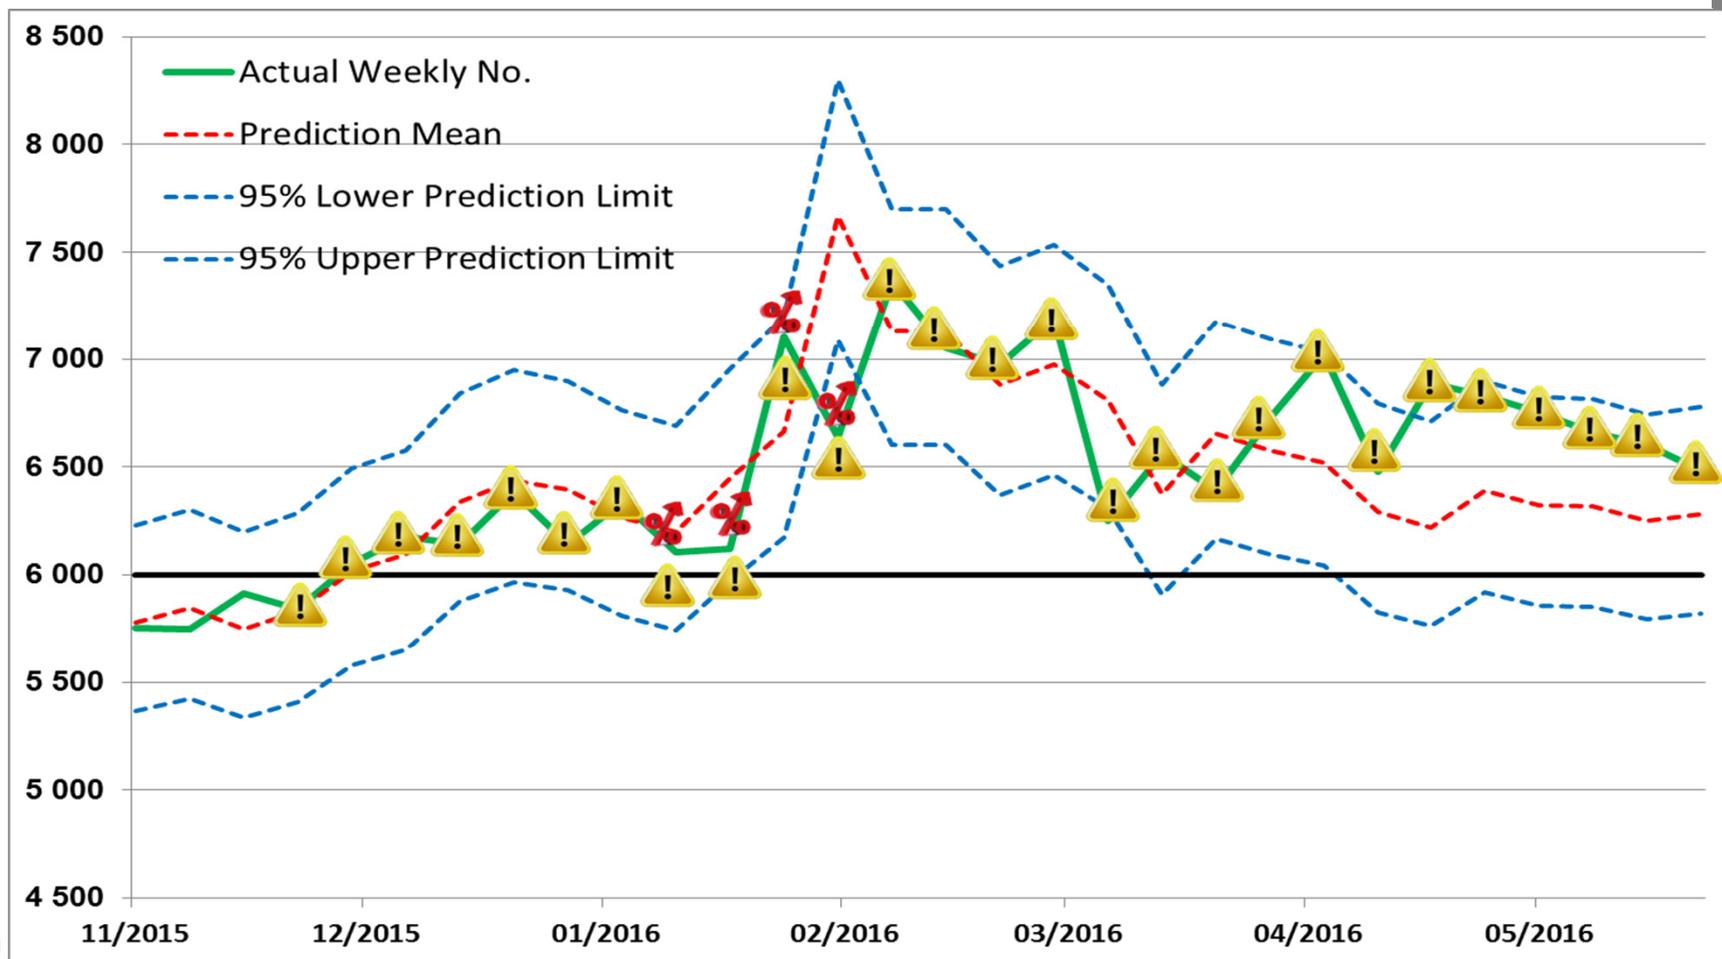

Two signals (on relative and absolute basis) will be triggered:

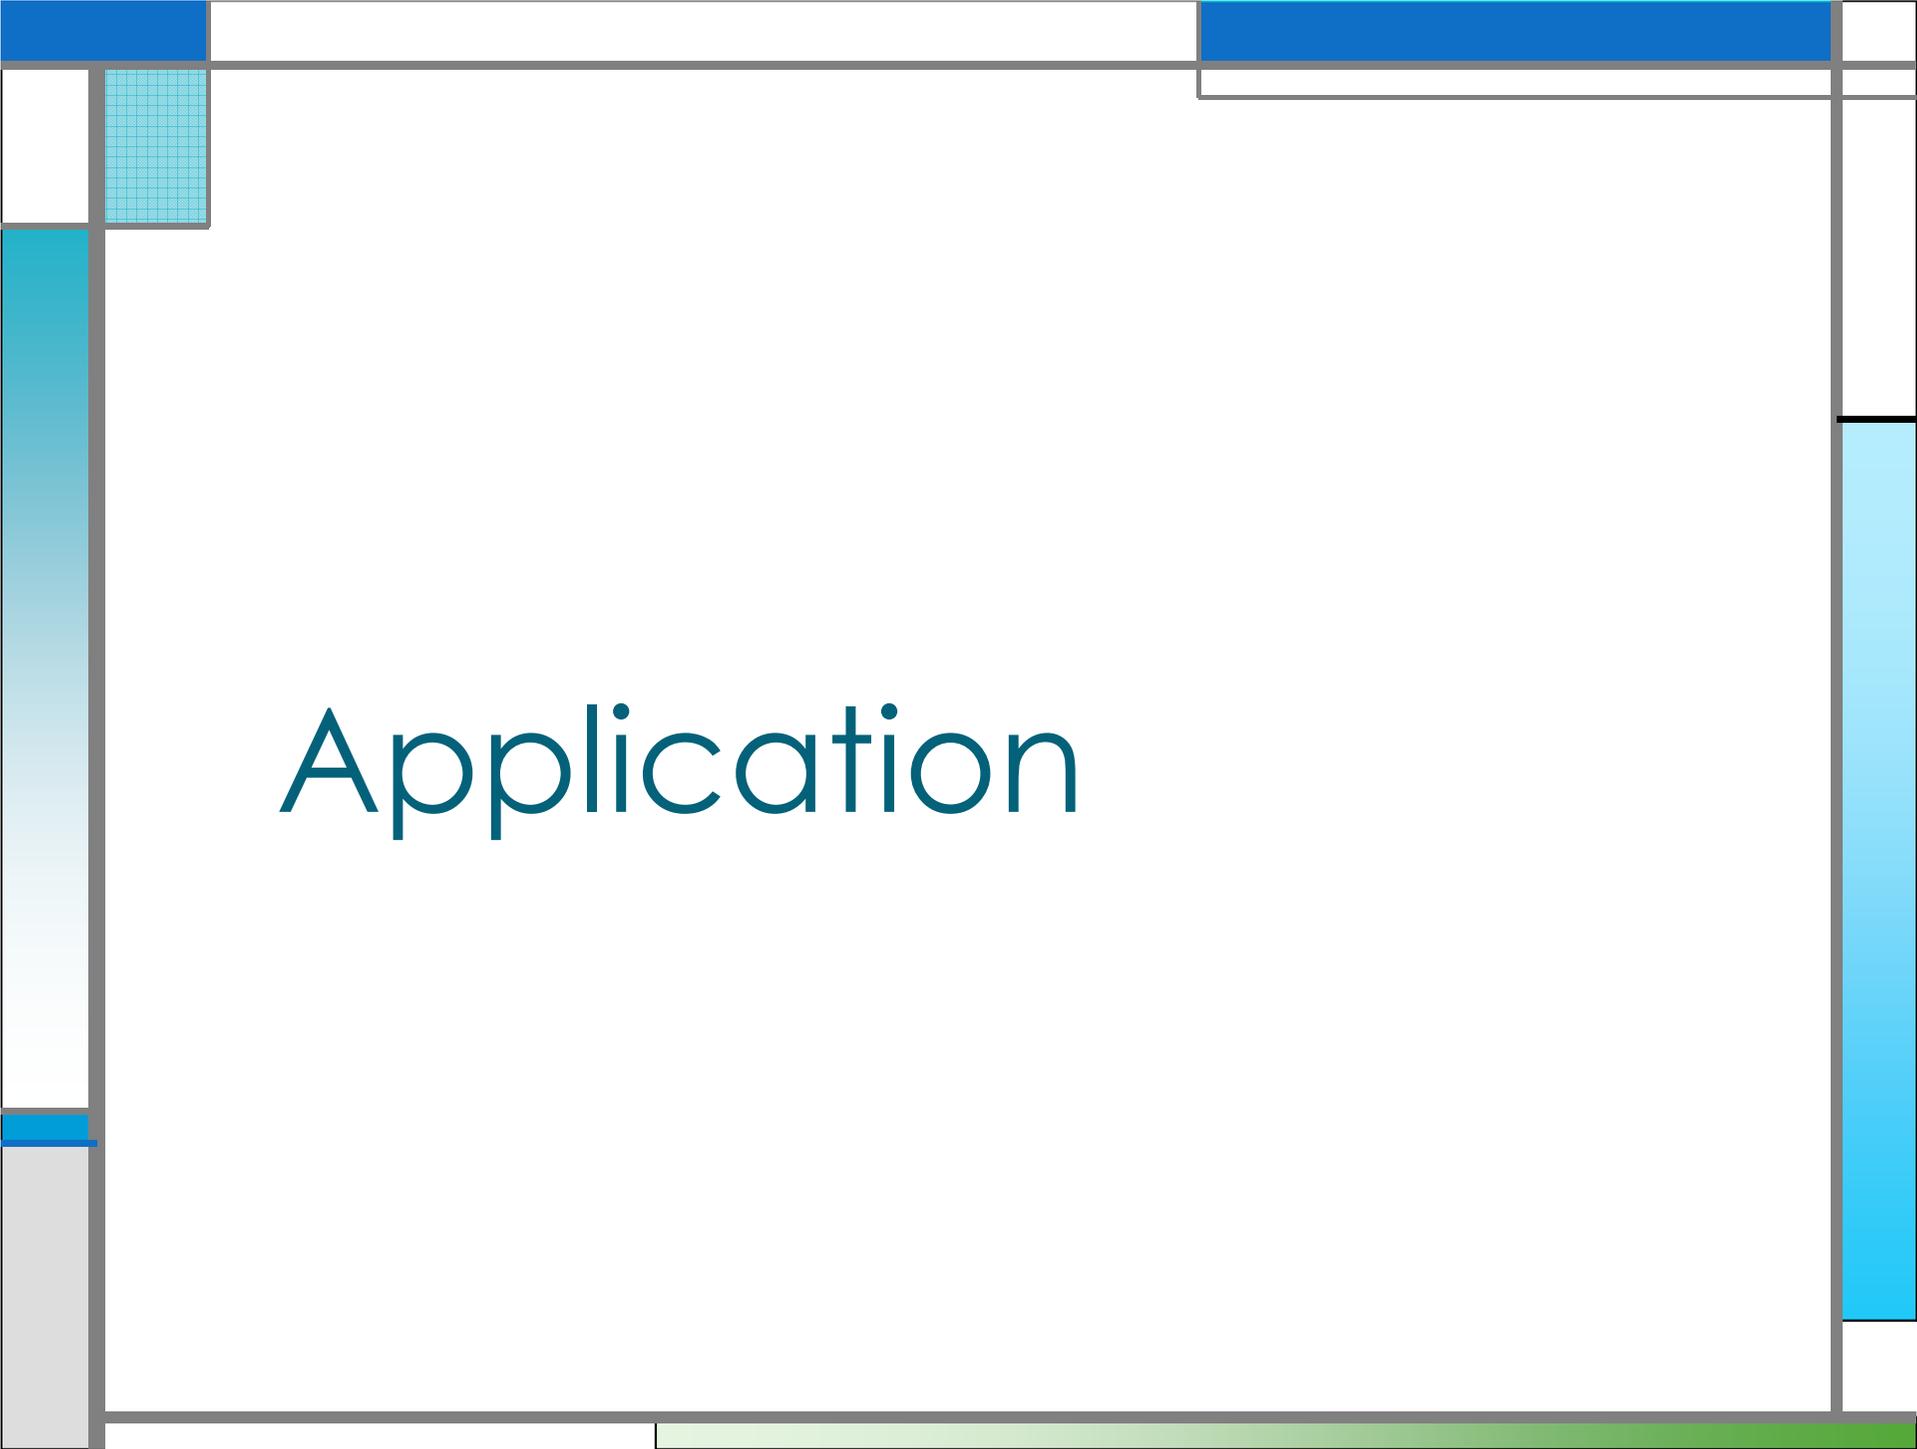

|  | when the predicted number for next week (T+1):             |
|--|--|
| Relative Alert Signal   | increases by 5% or more over this week's actual number (T) |
| Absolute Alert Signal  | exceeds the threshold of 6,000                             |

# Model Predictive Performance in 2015/16

Alerts triggered when the predicted number for next week (T+1):

- increases by 5% or more over this week's actual number (T) %
- exceeds the threshold of 6,000 !

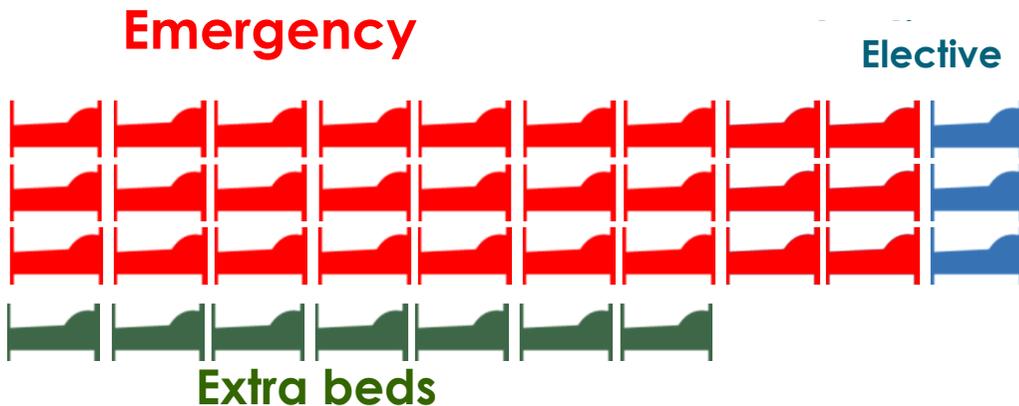

A diagram of a window frame with various colored bars and a grid pattern. The frame is composed of several elements: a dark grey border, a blue bar at the top left, a blue bar at the top right, a light blue bar on the right side, a light green bar at the bottom, a grey bar at the bottom left, a blue bar on the left side, and a small blue grid pattern in the top left corner. The word "Application" is centered in the middle of the frame.

Application

# Response Measures to cope with the Surge

Through triggering an early alert, this Model can facilitate HA in:

- Optimising and augmenting buffer capacity;
- Reprioritising core activities
- ...

**輪候逾八小時 加病牀疏導**

**流感超惡急症室逼爆 每日求診近7000人**

本報記者 李國威攝

公立醫院急症室昨日出現爆滿情況，多間醫院急症室求診人次直逼七千，甚至有人滯留入院逾十二小時。衛生局昨日表示，本週每日急症室求診人次逾七千人，較上週升幅一成。次數最多非急症室求診個案約八百小時，入內內科人數達數千。

在過去一週，多間醫院出現病人等候超過十二小時才獲入院。衛生局昨日表示，急症室求診人次增加，主要是由於非急症室病人增加所致。

**27人患乙流**

公立醫院急症室昨日出現爆滿情況，多間醫院急症室求診人次直逼七千，甚至有人滯留入院逾十二小時。衛生局昨日表示，本週每日急症室求診人次逾七千人，較上週升幅一成。次數最多非急症室求診個案約八百小時，入內內科人數達數千。

在過去一週，多間醫院出現病人等候超過十二小時才獲入院。衛生局昨日表示，急症室求診人次增加，主要是由於非急症室病人增加所致。

**內科爆滿倒灌 急入院須12小時**

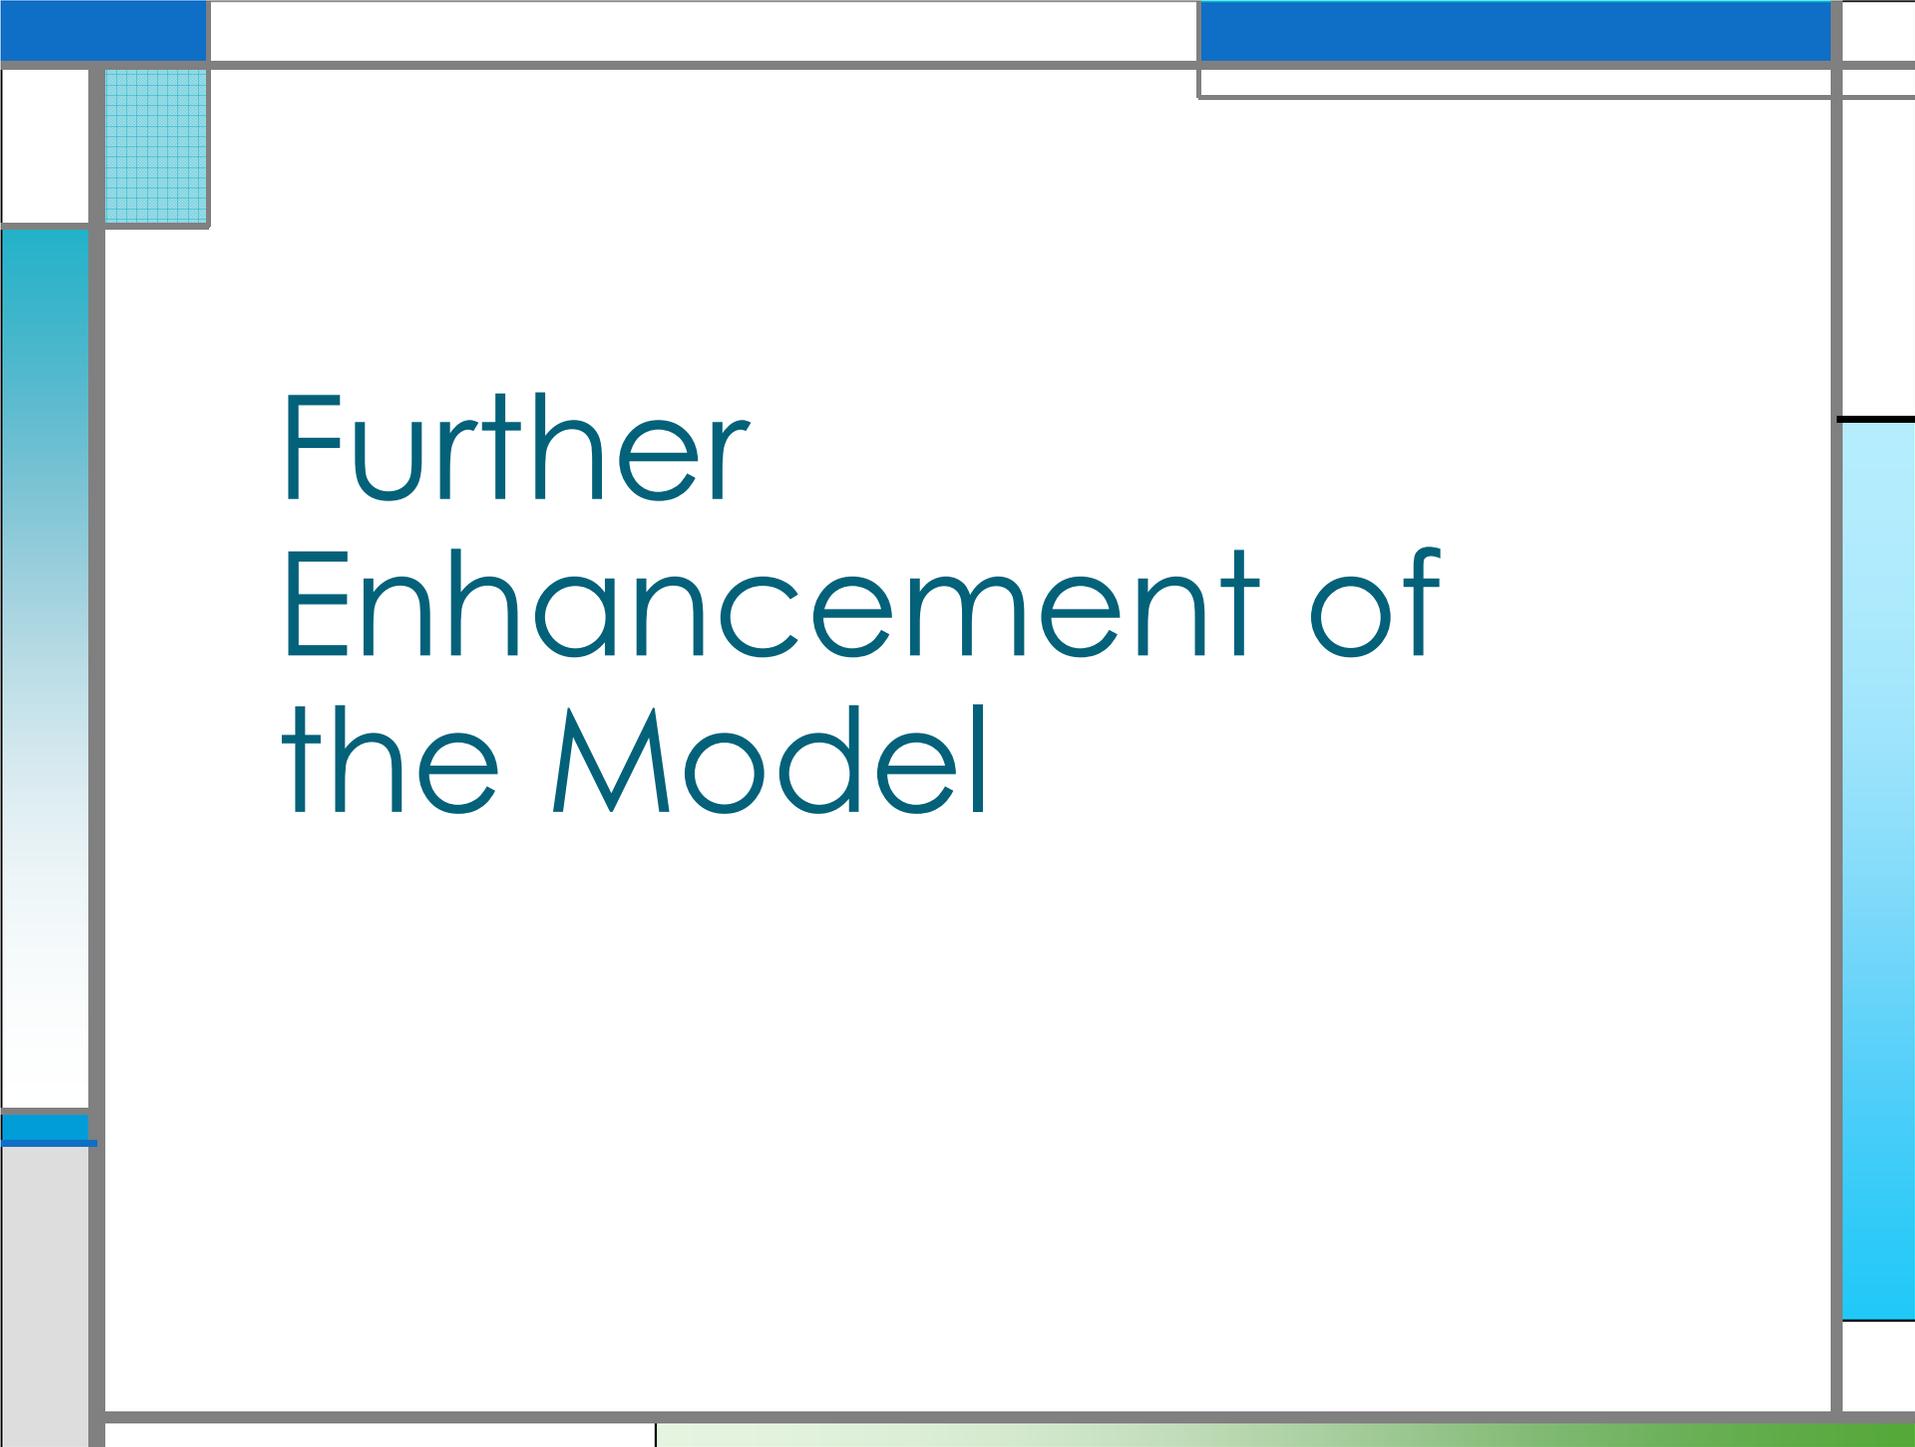

去年12月底進入冬季流感高峰，急症室求診人次不斷上升。衛生局昨日表示，急症室求診人次直逼七千，甚至有人滯留入院逾十二小時。衛生局昨日表示，本週每日急症室求診人次逾七千人，較上週升幅一成。次數最多非急症室求診個案約八百小時，入內內科人數達數千。

Further  
Enhancement of  
the Model

# Further Enhancement

- To extend the forecast period (e.g. *two-week ahead forecast*)
- To consider a wind speed factor for the *Wind Chill Effect*

# 冬季服務高峰期

WINTER SURGE

# Thank You
